

PROCRUSTINATION

Human nature seems to be about the same in most every way. It takes necessity's stern push to make human beings prepare for any foreseen or unforeseen occurrence.

THE NEW YORK SCANDAL

It is doubtful if the history of all the cities in this country will show another such example of unbridled liberalism as the recent New York police force scandal.

VACCINATION

The report of a case of smallpox in our neighborhood reminds us of another of the results of scientific work.

PARAGRAPHS

Somebody is being more interested in other people's affairs than they are themselves. Some men are born liars, some have to lie for a living, and some lie because their wives are too inquisitive.

It is quite probable that the ancient mathematician who first tried to square a circle had been trying to get a square deal from a political ring. One is about as easy as the other.

HIDDEN MONEY

Statistics show that the percentage of money lost outside of banks is greater than that lost thru bank failures by over 240 per cent.

Avoid all such contingencies by depositing your money with THE NATIONAL BANK OF MANASSAS

WOMAN'S AUXILIARY SECURES SPEAKER TEACHERS OF DOMESTIC SCIENCE

BRING UP FERTILITY FOR PROFITABLE CORN BY YEARLY ROTATION OF CROPS

ENGINE MANGLES EDWARD KNIGHT ACCIDENT OCCURS NEAR DEPOT

One of the most cruel and fiendish acts that has ever occurred in Manassas was committed on one of the main streets last Saturday night about 8 o'clock.

The teachers of Prince William County held their first meeting on Saturday, October 12, in the Bennett building.

The Prince William County Farmers' Association will hold its fourth annual convention at Bristow in the M. E. Church on Friday, October 25.

The Woman's Auxiliary of the Farmers' Institute is fortunate in securing Mrs. Mary Evans Dillard as speaker tomorrow.

Does it seem that any intelligent farmer could be satisfied with 15, 20 or 25 bushels of corn per acre?

Edward Knight, an ex-convict, was struck by one of the big C. & O. freight engines and nearly crushed to death here Tuesday morning.

A number of young men standing on a near corner saw the commotion and saw the man nearly in reach of him when he vanished in the lumber yards on Center street.

Mr. Round's interesting and instructive talks on our county was enjoyed by all present.

The Rev. O. Grey Hutchison was called upon and responded with a brief address.

The Farmers' Institute will be addressed by the Rev. Wm. Harry Dexter of the United States Department of Agriculture.

The question may be asked, why is our corn yield so low and why do we not make an effort to increase it?

Some time during Monday, Knight arrived in Manassas from the convict camp at Warrenton and was on his way home after serving a six-month sentence on the road for stealing whiskey in Winchester some time ago.

Search was made and several others searched his home, but no trace of him could be found.

Manassas teachers at a beautiful luncheon served under the able direction of Miss Metz.

After a brief of Round Table, owing to lack of time, the meeting adjourned.

Eastern College has now about fifteen candidates reporting for practice every evening and under the coaching of C. M. Hopkins is developing rapidly.

How are we to bring about a change? We must lead the farmer to see that he can "make his living" by growing other crops than corn.

On Friday, Oct. 11, Mr. C. R. McDonald spoke to the children of the Haymarket school on coal mining in Pennsylvania.

What possible thought could prompt such a deed is beyond reason and a just penalty for such a deed would be to give him some of his own medicine.

Col. H. H. Baker, the editor of the Times-Democrat, will visit Manassas next week.

Get out your rosin and tighten up the strings on your fiddle, for the great contest is near at hand.

Eastern College has now about fifteen candidates reporting for practice every evening and under the coaching of C. M. Hopkins is developing rapidly.

The yields of corn in Virginia and the South are shameful low; there is being raised some every year now, probably 20 bushels or thereabouts per acre.

Most assuredly it can be done, for it has been proven by our "boy farmers" of the month that the southern territory is in reality the corn belt of the future.

MEETING OF ANTI-SALMON LEAGUE An enthusiastic meeting of the Anti-Salmon League was held yesterday in Bradley Methodist church.

Col. H. H. Baker, the editor of the Times-Democrat, will visit Manassas next week.

Anyone who doesn't like this music has no music in their body. It starts your feet patting, then both feet, you get to dancing and the first thing you know you give a jig.

At the regular annual meeting of the School Trustees Electoral Board on August 31, the following trustees were re-elected.

They want to make a yield of 50-60 bushels per acre with an average cost of production of 10-15 cents per bushel.

They want to make a yield of 50-60 bushels per acre with an average cost of production of 10-15 cents per bushel.

General talks on any subject pertaining to League Work or Temperance Reform Movement.

We desire to express our sincere appreciation to the many kind friends who assisted us joyfully in our recent honorment.

TELLS OF ICE CAVE IN SWEDEN VALLEY

MR. HUTCHISON GIVES THEORY

Has Been Making Further Research Concerning Cause of Unusual Phenomenon of Ice Forming in Cave.

By O. GREY HUTCHISON.

Since my article in the Journal of September 20, I have been making further research regarding the cause of the unusual phenomenon of ice forming in the hot summer time.

I was not satisfied with the explanation given by a geologist, as recorded in the former article, that the cause is the fumes of platinum. So I wrote to the geological section of the agricultural department at Washington, D. C., for their explanation of this phenomenon.

They did not give me even a supposed cause for it, but referred me to two articles: one by Mr. Alois F. Kovarik in the Scientific American Supplement, of November 26, 1898, pp. 1915-9, on the supposed cause for the ice cavern at Decorah, Iowa; the other by Dr. Samuel Catlin in his "Geology of Winnebago County, Iowa, Iowa Geological Survey, vol. 16, pp. 142-5.

The Department at Washington did say, however: "The conditions attending the formation of ice in the cavity to which you refer are very likely similar to those causing the formation of ice in the cave at Decorah, Iowa. From those descriptions you will see that no chemical action or combination of minerals has anything to do with refrigeration. But, the Survey has published no reports regarding this phenomenon."

After carefully reading the article in the Scientific American Supplement, I find that the conditions of the Decorah cave do not obtain in Sweden Valley, Foster County, Pennsylvania. In the cave at Decorah there was water to freeze, but in the shaft at Sweden Valley there is no water except when the ice melts, and then only so long as the ice is melting.

The following is copied from the Scientific American Supplement: "During the ice formation period there is a strong current of air blowing from the cave outward for about ten meters. This current is so strong as to make it impossible to light a match, and right at the entrance to the cave a candle is blown out if held near the floor. In the winter when there is no ice forming the current is reversed, blowing inward instead of out of the cave. The maximum thickness of the ice was about 1 1/2 feet; it was 26 cubic meters. From this time it decreased until September 3, when the ice was all gone."

After September 6 the temperature continued to rise until it reached the maximum of 23.3° C., or about the temperature of a cold spring. From this it decreased until February 26, when it reached its minimum of 6.6° C.

THE ORIGIN The origin of this cave is undoubtedly due to the slip of the southern part of the bluff caused by the undermining of the river. This is shown on the outside, also, in the ice chamber of the cave where the south wall curves over the path and rests on the solid north wall. Besides the direction of the cave is westward—the direction of the fault.

No signs, outside or inside, are there that would indicate that it was formed by erosion. The ice chamber is at a depth of nearly uniform temperature throughout the year, about 2° C.

Theories were advanced to explain the phenomenon of the ice cave. For explaining the cause of the formation of ice in the Decorah ice cave, and in any ice cave so far reported, some of the theories are absolutely untenable.

I shall not touch upon these in this paper, as they have been discussed to some extent in Mr. Batch's "Ice Caves and the Causes of Subterranean Ice."

As in different years there are changes in some things relating to the phenomenon, such as the dates of the first appearance of ice, the maximum quantity, the lowest and highest temperatures, etc., and the changes of temperature in general, we must have a true description of the variations throughout one year at least before we can safely draw conclusions.

The density of the air and gravitation cause the currents inward and out of the cave. If the denser air is within the cave, the natural flow is outward, and inward when the reverse are the conditions. The strong breeze outward and the cloud of condensed vapor on a hot day in June or July is due to the great difference in temperature (outside and inside the cave), sometimes exceeding 34° C. To the difference of temperature, is also accounted the moisture on the walls. There being many small ramifications of the cave, besides the main passage, the cold air of the winter penetrates these and freezes the walls of the cave to a great depth. The air passing through the cave gradually changes its temperature to the temperature of its surroundings, and escapes through the openings in the daylight chamber also, though probably less, through little crevices out above the bluff. In this way the walls of the cave come into direct contact with the cold atmosphere of the winter and store up in themselves a great amount of "cold" for the use in summer, when reverse takes place.

The length of duration of the ice in the cave during the spring and summer depends upon the quantity of the "cold" stored up the walls and this again upon the thickness and the length of coldness of the previous winter. If the winter be severe and long, the walls will store up a great supply of "cold" for the gradual dissipation in the spring and summer, and consequently the phenomenon in the ice chamber will last longer. Last winter with the exception of the latter part of December, was quite mild. As a result the ice began to disappear with the latter part of June, and totally disappeared by the end of July. Through information I learned that during the years 1886 and 1887, the ice cave contained especially a great amount of ice. This is apparent, as the winters previous were remarkably severe for this locality, and a vast amount of snow covered the ground.

The time of the lowest temperature in the cave depends upon how soon the cold spells of the winter begin; and the sooner the walls begin to freeze the greater depth, the sooner have they stored up the greatest amount of cold, ceteris paribus.

Last winter the cold spells were during December and the lowest temperature was noticed on February 26, 1898. In the winter of 1886 and 1887 the coldest spells came about the end of January, and the lowest temperature was in April, same (according to W. O. Nordheim, of Decorah); was true in 1895.

February 23, 1898, when the walls contained the greatest amount of "cold" there was no ice in the cave, for the reason that no water made appearance. Had water appeared, no doubt a great amount of ice could have formed; but as the conditions are, the water has to come from the ground outside, and this being frozen at the time, water could not in any natural way appear.

It is in early spring sufficiently warm days should come to melt the snow and open the ground, the water not taken up by the ground would flow and seep through the crevices into the cave, and the water would appear early. Somewhat such conditions prevailed this year, for warm days appeared early in the spring. If per contra, the ground does not open until April, as the case in 1896, the appearance of ice is consequently delayed. In 1895 (according to Mr. Nordheim) ice did not make its appearance until May 22.

The dry condition of the ground and the mild winters of few of the previous years bear the responsibility for the diminished quantity of ice in those years, for the requisite for the formation of ice at any place is water and sufficiently low temperature to freeze that water.

After seeing the facts given above, it would be absurd to think that ice forms in the hot summer and thaws in the cold winter, as is the common notion about the phenomenon. The lowest temperature is in the winter. The heat of the summer has a great difficulty in reaching the ice on account of its sheltered position. Nevertheless it is that which thaws the ice and raises the temperature above freezing. A comparison of figures at "divisions" and "outside" the cave proves this beyond doubt. If the entrance had been left a small opening, as it naturally was, it is my belief that the temperature of the interior of the cave would be lower in summer than it is, and the ice would not disappear as soon as it does.

It will be noticed that I attribute the cause of the low temperature in the cave is the summer to the storage of cold in the walls communicated to them by the cold air of the winter having a place to enter and a place to escape.

I hold it true that it is the cold of the winter that is the cause of the formation of ice in any cave, for no ice caves are reported from winter, while ice caves are found in France and Switzerland, where winter prevails through a part of the year, and furthermore, that the cold from the outside reaches the interior, either directly through the rock (in which case the cave cannot be at a great depth), or more likely is brought in by the air, not necessarily through the ice cave proper, though possibly, but probably through crevices near the walls of the interior.

As to the reason that the cave water is still found in the cave, but no ice forms, I believe it is due to the fact that the cave is not so deep as to store up a great amount of "cold" for the use in summer, when reverse takes place.

As a matter of fact the hotter the weather at Sweden Valley there is the most ice formed. If one day is hotter than the day previous, and if the day is cooler than the day previous there is less ice than on the day previous.

But the gentleman has given a clue, I think, to the Sweden Valley phenomenon—it is this: This ice cave is situated in a natural gas belt. Now as everybody knows, why does water freeze in cold weather? It is because the water has to come from the ground outside, and this being frozen at the time, water could not in any natural way appear.

It is in early spring sufficiently warm days should come to melt the snow and open the ground, the water not taken up by the ground would flow and seep through the crevices into the cave, and the water would appear early. Somewhat such conditions prevailed this year, for warm days appeared early in the spring. If per contra, the ground does not open until April, as the case in 1896, the appearance of ice is consequently delayed. "Joy Among the Cooks" C. J. MEETZE BRISTOW, VIRGINIA. We have just installed a new Purifier in our mill at a cost of \$200.00, and given the mill a general overhauling, and have with us an expert miller, and our flour is giving entire satisfaction. We guarantee it to be as good as any of the Patent Flour shipped in the State. Five bushels wheat gets you 1 barrel of flour, and 5 1/2 bushels of wheat gets you 1 barrel flour and 66 pounds of offal. Your patronage solicited.

Wilson Stands For a Principle Will You Stand By Him? Woodrow Wilson is not among the great majority of politicians and business men, otherwise entitled characters, who believe that the end justifies the means, who are honest in a commercial or political sense. "No Tainted Money For Wilson" The people have constantly made the mistake of believing that this is a money-raising nation. "What the American People Need to Know" The actual money power of the People is still greater than that of the interests. "The People to Fight with THEIR Dollars" The real support of Wilson's policy is to be collected from the rank and file of the Progressive Voters of the country. "We Solicit Popular Subscriptions—Can You Give From \$1 to \$20?" "Get Club Subscriptions" "New to Contribute to the Wilson Campaign Fund" "Woodrow Wilson Campaign Fund LOYALTY COUPON"

UNCONDITIONAL SURRENDER OF STUBBORN MILLICENT By HARMONY WELLER. Millicent stepped lightly from her bedroom and into the lobby of the apartment. She was conscious of presenting an unusual picture in her big drooping eyes and her hair was wavy; there was just a suggestion of melancholy about Millicent that only exaggerated her charm. To the standing near the lock Millicent seemed the embodiment of all that was lovely.

"We have been booked back for the last six weeks," the man told her. "I don't know," Millicent said. "I haven't informed the man behind the window. He must have taken the money for the appealing eyes swept across space to the good-looking man whose gas had brought the color into her cheeks. Her fingers trembled slightly as she turned for her ticket.

Millicent hurried to a second only when in a hurried voice thanked him. "And you are not robbing yourself," she questioned. "The seat will go begging if you do not use it," the man said and gave her the ticket. Millicent reached down into the depths of her opera bag and brought forth a beautiful hat. "Is that right?" she asked and did not raise her eyes.

"A full red mounted eye to the man's temple," he drew it swiftly and he suddenly took the money. "Thank you, yes." He raised his hat and Millicent went into the well-lighted theater. A moment before the curtain arose she knew that he had come in and that he was sitting beside her. Millicent felt peculiarly surprised that he had not so much as looked at her. She found herself losing interest in the actors and watching every movement of the long, shapely hands of the man. Occasionally she stole a suspicious glance at his watch.

"The success of the play had come, not through any hectic love affairs with another man's wife or any great scandal crisis. It was a modest success. The success of the play had come, not through any hectic love affairs with another man's wife or any great scandal crisis. It was a modest success. The success of the play had come, not through any hectic love affairs with another man's wife or any great scandal crisis. It was a modest success.

"The light went down and the organ music he was not seeing. "How perfectly ridiculous," she thought, but her eyes were fixed on the man beside her whose personality seemed to have overshadowed her. "Whatever it was Millicent waited with rapidly beating heart for his response. The light went down and the organ music he was not seeing. "How perfectly ridiculous," she thought, but her eyes were fixed on the man beside her whose personality seemed to have overshadowed her.

"The young dancer's room was so crowded that she could not get a seat. Among the new dancers being shown are those of no second frequent. It is not to be wondered that the dancer has been so successful and that she is so popular. The young dancer's room was so crowded that she could not get a seat. Among the new dancers being shown are those of no second frequent. It is not to be wondered that the dancer has been so successful and that she is so popular.

BLOUSE SLEEVE IS NOVEL. Gaudium, Comfort and Artistic Appearance Combined in a Recent French Importation.

There is a genuine comfort in the sleeve displayed in one of the recent imported French blouses. It is long, narrow and straight, with long sleeves with the same collar which they adopted the short ones in the winter, and is light from the elbow to the wrist, and is comfortably fitted into the armhole under the arm, but the upper portion runs right up over the shoulder to the collar.

MUSLIN DRESS FOR GIRL. Bug—What's going on tonight? I see so many frogs going down the road. Grasshopper—Why, the Greenback Social is going to give an entertainment and a dance.

LONG SLEEVE MOST POPULAR. Variety is a Great One, Best Frocks Are Made With It, Includes Long One. Since evening dresses and little dance frocks are in a class by themselves and presuppose the use of long sleeves, their sleeves are long. There is no little of 1912 in the first place. But fashion has given her flat anant afternoon dresses and suits. Here are some of the changes.

NOT ALWAYS SO. "My little boy had a marvelous escape," writes P. F. Bastians, of Prince Albert, Crepe of Good Hope. It occurred in the middle of the night. He got a very severe attack of the group. As luck would have it, I had a large bottle of Chamberlain's Cough Remedy in the house. After following the directions for an hour and twenty minutes he was through all danger." Sold by all dealers.

TO AILING WOMEN. A Little Sound Advice Will Help Many a Sufferer in Manassas. No woman should consider herself healthy and well if the kidneys are weak. Poisons that pass off in the secretions when the kidneys are weak are retained in the body when the kidneys are disordered. If the kidneys and bladder become inflamed and swollen worse troubles may quickly be brought down upon the sufferer by backache, etc. Uric poisoning is also frequent cause of headache, dizzy spells, languor, nervousness and rheumatic pain.

TOPICS OF THE TOWN

TO OUR PATRONS

We are mailing out statements to all who are indebted to the DEMOCRAT... Dr. H. M. Clarkson, Haymarket, was a Manassas visitor one day this week.

Paul Hutchison, of Quantico, was a town visitor for a few days this week. Mrs. C. W. Payne is visiting friends in New York city for several weeks.

Alfred Leyburn, of Washington, spent Sunday at his home in Manassas. Miss Nettie Ardalla, of Washington, was in town this week, visiting friends and relatives.

Miss Libbie Britton spent Sunday at Nokesville. C. J. Meetze made a sale of a mare and two colts to a Manassas dealer this week.

Mr. Fred Nelson, who has been ill for two weeks, we are glad to report is better. Mr. and Mrs. F. B. Shirley and children, of Calverton, spent a few days last week at Gray Gables.

At this, the beginning of the fourth term of this school, there are enrolled 256 students, 129 of which are old girls and 127 new girls. Among these are representatives from sixty counties and a number of states.

The school consists of eighteen regular members and as many more assistants. The school opened Wednesday, Sept. 25. When the girls arrived they were met at the station by one or more members of the faculty and escorted to the dormitories.

A joint meeting of the Lee and Lanier Literary Societies was held Sept. 25. The program, which was a very interesting one, was greatly enjoyed by all.

The student member of the Y. W. C. A. entertained the school at a reception on Friday, Oct. 4. The Daughters of the Confederacy, who are holding their annual meeting in town this week, were entertained by the school on Wednesday last.

Chas. Lynn had a peculiar accident happen to him last week in lifting some corn he was cutting. He dislocated his knee cap which required the attention of a physician to reduce.

Mrs. J. F. Britton raised a heat this summer which weighed 64 pounds and measures 22 inches in circumference. This heat must almost equal in size the "heat" in New York on which two policemen were found asleep at one time.

A wagon loaded with meal en route from Sinclair's Mill on Friday was met by an automobile on the bluff overlooking Cannon Branch which resulted in a runaway of the two mules attached, upsetting the whole load into the river.

BOYS:

Every boy is a miniature business man. If he manages his little business affairs with credit to himself, he will be a good manager of big affairs later in life.

A LOG ON THE TRACK of the fast express means serious trouble ahead if not removed, so does loss of appetite. It means lack of vitality, loss of strength and nerve weakness.

BUSINESS NOTICES FIRST INSERTION, FIVE CENTS A LINE SUBSEQUENT, THREE CENTS

WANTED - Young men and women in this town as contestants to get subscriptions for the local agency of the Y. W. C. A.

UNLAWFUL HUNTING, TRESPASSING ON ANOTHER'S LANDS AND WATERS. If any person without the consent of the owner or tenant, shoot, hunt, range, fish, trap, or fowl on or in the lands, water, mill ponds or private ponds of another, which are enclosed or on the boundaries of which, or the streams adjacent to which, constitute a lawful fence or on any lands, waters, mill ponds or private ponds of another, east of the Blue Ridge, or in the waters on said land, he shall be deemed guilty of a trespass, and upon conviction thereof shall be fined not less than five dollars nor more than fifty dollars, and in addition thereto shall be liable in an action for damages; and if any person, after being warned not to do so by the owner or tenant of any premises, shall go upon the lands of the said owner or tenant, he shall be deemed guilty of a trespass, and upon conviction thereof shall be fined not less than five dollars nor more than fifty dollars, and in addition thereto shall be liable in an action for damages; and if any person, after being warned not to do so by the owner or tenant of any premises, shall go upon the lands of the said owner or tenant, he shall be deemed guilty of a trespass, and upon conviction thereof shall be fined not less than five dollars nor more than fifty dollars, and in addition thereto shall be liable in an action for damages.

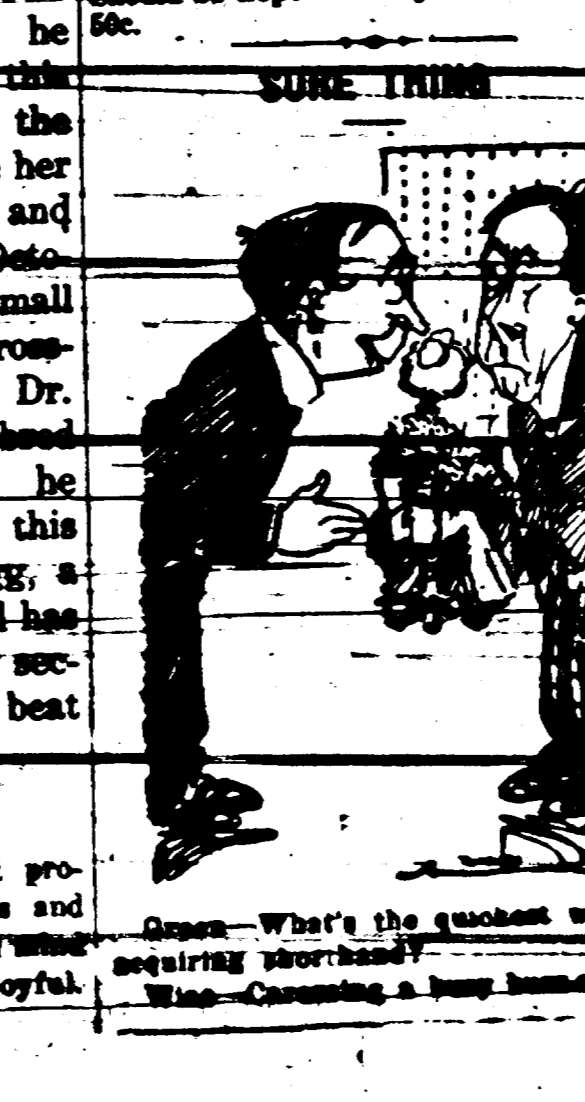

ENLIST FOR WAR. The adjutant general of Virginia, Hon. W. W. Sale, has issued an order establishing a recruiting office at each company station, whose duties will be to obtain a list of all able-bodied male citizens residing in that vicinity, between the ages of 18 and 35 years, who would be willing to enlist in the event of war and who have had previous military experience or who have attended a well established military school. This list is to be known as "The Reserve List," and will be kept up to date.

When a local organization goes to the state nomination camp at Richmond the war recruiting officer will remain behind with a detail of men to continue recruiting until the campaign is nearly ready to go to the front.

Robert Young, living near Buckhall, tells of a pullet he hatched early in April of this year that began to lay about the middle of August. She stole her nest, laid a clutch of eggs and hatched about the 1st of October with 10 nice, though small chickens. The pullet is a cross-bred of Hamburg-Leghorn. Dr. Johnson tells of a thoroughbred White Wyandotte pullet he hatched early in April of this year, that laid her first egg, a double yolk, on Oct. 2, and has laid a double yolk egg every second day since. Can you beat that?

CHRONIC DIARRHEA. The following unscientific testimony should be certain sufficient to give hope and courage to persons afflicted with chronic diarrhea: "I have been ill three or four years, and of all the remedies I have taken, Chamberlain's Colic, Cholera and Diarrhoea Remedy has done me more good than anything else." - Mrs. W. G. Mason, No. 7 Sherman St., Hornellville, N. Y. Sold by all dealers.

THEY MAKE YOU FEEL GOOD. The pleasant purgative effect produced by Chamberlain's Tablets and the healthy condition of body which they create make one feel joyful. For sale by all dealers.

FOUND - New rubber apron. Apply at this office.
