HIDDEN MONEY

Statistics show that the percentage of money that leaves the banks is greater than that which remains on deposit with the banks. The average person will withdraw about 70% of his money from the bank during the year. This means that the banks will have to increase their reserves by at least 100% to meet the increased demand for cash. This increase in reserves will result in a reduction of the money supply, which in turn will lead to higher interest rates. The banks will have to charge higher interest rates to cover the increased cost of keeping their reserves. This will make it more expensive for businesses to borrow money, which will slow down economic growth. The government will also have to increase taxes to pay for the increased cost of keeping reserves, which will further reduce the money supply. This cycle will continue until the money supply is reduced to a point where the banks can meet the increased demand for cash. At this point, the economy will be in a recession, with high unemployment and low economic growth.
"Joy Among the Cooks"

We have just installed a new Purifier in our mill at a cost of $206.00, and given the mill a general overhauling, and have washed an expert miller, and the flour is giving entire satisfaction. We guarantee it to be as good as any of the Patent Flour shipped in the State. Five bushels wheat gets you 1 barrel of flour, and 5½ bushels of these gets your 1 barrel flour and 66 pounds of offal. Your patronage solicited.

CIDER
I am now furnishing New Russian Cider and Second Quality cider, at reasonable prices. It is very good, and a splendid drink.
