

PLANNING COMMISSION RESOLUTION

MOTION:

September 28, 2022
Regular Meeting

SECOND:

Res. No

RE:

COMPREHENSIVE PLAN AMENDMENT #CPA2018-00006
MOBILITY CHAPTER
COUNTYWIDE

ACTION: RECOMMEND ADOPTION

WHEREAS, under Section 15.2-2229 of the Virginia Code, the Board of County Supervisors may consider amendments to the Comprehensive Plan; and

WHEREAS, Section 15.2-2230 of the Virginia Code requires a review of the Comprehensive Plan every five years to determine whether it needs to be amended; and

WHEREAS, due to the availability of updated demographic projections extending to 2040, policies adopted by the Board of County Supervisors, changes in State law and completion of numerous public infrastructure projects, there is a need to update the Comprehensive Plan; and

WHEREAS, on August 3, 2016, the Board of County Supervisors in Res. No. 16-647 initiated an amendment to the Comprehensive Plan for the Mobility Chapter; and

WHEREAS, the intent of the Mobility Chapter is to provide an accessible, safe, comprehensive, multimodal transportation network that allows for the safe and efficient movement of goods and people throughout the County and into surrounding jurisdictions; and

WHEREAS, the Planning Office published the final draft of the Mobility Chapter on August 2022, and was available for review and input; and

WHEREAS, on May 26, 2021, June 9, 2021, June 15, 2021, and February 10, 2022, the Planning Office held community meetings in which feedback was received on the Comprehensive Plan Amendment #CPA2018-00006, Mobility Chapter; and

WHEREAS, on July 7, 2021, September 15, 2021, November 3, 2021, January 26, 2022, February 23, 2022, April 6, 2022, and July 27, 2022, the Planning Office held a public information meeting and Planning Commission Work Session at which the Comprehensive

Plan Amendment #CPA2018-00006, Mobility Chapter was available for review and input; and

WHEREAS, on May 10, 2022, and July 12, 2022, the Planning Office held a public information meeting and Board of County Supervisors Work Session at which the Comprehensive Plan Amendment #CPA2018-00006, Mobility Chapter was available for review and input; and

WHEREAS, the Prince William County Planning Commission duly ordered and advertised a public hearing for September 28, 2022, on Comprehensive Plan Amendment #CPA2018-00006, Mobility Chapter and interested citizens were heard; and

WHEREAS, the Planning Office recommends the Planning Commission recommend that the Board of County Supervisors adopt Comprehensive Plan Amendment #CPA2018-00006, Mobility Chapter; and

WHEREAS, the Planning Commission finds that this amendment guides and accomplishes a coordinated, adjusted and harmonious development of the territory which will, in accordance with present and probable future needs and resources, best promote the health, safety, morals, order, convenience, prosperity and general welfare of the inhabitants, including the elderly and persons with disabilities; and

WHEREAS, #CPA2018-00006, Mobility Chapter will replace the Transportation Plan, and the Trails Map in the Parks, Recreation, and Tourism Plan of the Comprehensive Plan;

NOW, THEREFORE, BE IT RESOLVED that the Prince William County Planning Commission does hereby recommend that the Board of County Supervisors adopt Comprehensive Plan Amendment #CPA2018-00006, Mobility Chapter.

RE: NVBIA Comments for Housing, Mobility and Sewer Chapters

The Planning Office received the attached letter from NVBIA, with recommended changes to the language of the Housing Chapter for the update to the Comprehensive Plan which are enclosed for your review and consideration.

Some of the requested changes are clarifications and some of the changes relate to policy decisions. Planning staff is neutral in opinion to proposed changes. If the Planning Commission desires to incorporate the new language as part of their recommendation, it is a policy recommendation for the Planning Commission to make. Staff continues to recommend the chapter as published with the staff report but is neutral to changes requested by NVBIA because they are policy decisions. Both the staff recommendation and the NVBIA requests are sound planning policies.

NVBIA has also provided comments related to the Sewer and Mobility chapters, which are under consideration by the Planning Commission on November 9. The Planning Office has not received comments from the Transportation Department or the Service Authority regarding the proposed changes. Staff will be prepared to address any questions regarding staff comments on the proposed changes at the hearing.

The documents associated with the Comprehensive Plan updates can be found at the following link:
www.pwcva.org/pathwayto2040.

RE: Comprehensive Plan Land Use and Housing Chapters

Dear Rebecca,

During the September 28th, 2022 Planning Commission hearing and discussion on the Comprehensive Plan Land Use Chapter, one of the resolutions specifically called out consultations with the Northern Virginia Building Industry Association (NVBIA). We had previously requested a meeting specifically on the Land Use and Housing Chapters and met with staff. We would like to arrange to meet to discuss some of the challenges posed by the current Land Use language as passed as well as discuss the draft Housing Chapter before the next Planning Commission Hearing Set for November 9th.

We will make a team available to meet at your earliest convenience. Please contact Saif Rahman at saif@jrrealestatellc.com with your availability.

Thank you for your time.

Debbie Rosenstein
Chief Executive Officer
NVBIA

Saif Rahman
Prince William Chapter President

COMMENTS ON THE HOUSING CHAPTER OF THE 2040 COMPREHENSIVE PLAN

Current Language

H2.2: To increase housing supply, support housing at transit supported densities and support opportunities to create vertical mixed-use centers with a distinct sense of place.

Amended Paragraph Language:

H 2.2 To increase housing supply, support housing at transit supported densities, and near employment areas, and support opportunities to create vertical mixed-use centers with a distinct sense of place. The highest planned density shall be encouraged for sites unless other elements of the plan (e.g. transportation limitations in the immediate vicinity) can only be resolved through reduction in density.

Explanation: There is no transit in western Prince William County as residential is discouraged near the Manassas Airport VRE station. Higher densities near employment is key to producing mixed-use projects. People should be able to live within a short distance of their work adding employment as a metric allows for density around employment and retail centers.

Current Language:

H 2.15 Permit and encourage higher-intensity multifamily apartment living in the County's activity areas as part of both stand-alone and mixed-use developments.

Amended Paragraph Language:

H 2.15 “Permit and encourage higher-intensity multifamily apartment living in the County's activity areas, Activity Centers and Redevelopment Corridors as part of both stand-alone and mixed-use developments and Encourage multi-family units that rent above 120 percent of AMI to reduce demand pressure on affordable housing stock.

Explanation: The County’s housing consultant recognized that a significant shortage in rental units above 120 percent AMI is part of the affordable housing shortfall. The consultant identified this as an issue because people in the upper

income brackets were competing for housing that would traditionally serve lower brackets driving up the costs for all.

Current Language:

H 3.4 Support reductions in the costs of development and redevelopment during the rezoning process—consider reductions in the mitigation of offsite development impacts, including developer proffer contributions, which can help reduce the cost of development, and Amended Paragraph

Amended Paragraph Language:

H 3.4 Support reductions in the costs of development and redevelopment during the rezoning process by excluding ADU and workforce units from proffer monetary or “in-kind” contributions as an incentive to offset the cost of providing ADU in new developments or modifying requirements to reduce costs of development and construction.

Explanation: Solving the ADU problem will require a holistic approach. Eliminating proffers is one important part of the solution, by doing so this allows for developments to accommodate ADU’s without incurring larger economic losses.

Current Language:

H 3.8 Build upon the County’s "Affordable Housing Trust Fund". Allow voluntary contributions to the fund that an applicant deems reasonable and appropriate; and those that may be in lieu of building affordable units onsite-- contingent upon the Board adopting an ADU ordinance.

Amended Paragraph

H 3.8 Build upon the County’s "Affordable Housing Trust Fund". Allow voluntary monetary contributions in lieu of onsite units upon adoption of a policy as a way to build the administrative staff to support ADU goals and to provide the county flexibility to pursue the most opportunities to restore existing housing, and innovative approaches to addressing needs in specific communities.

Explanation: The success of the ADU program will depend on building flexibility into all aspects of the program. This would allow for the County to build up the Housing Trust fund, and leave flexibility for smaller projects to pay into the fund.

Current Language:

H4.2 Support future housing growth and infill development in designated activity centers at transit supportive densities, with a variety of housing types to meet regional housing targets, to reduce traffic congestion and reduce commuting costs for residents, especially for residents when housing costs result in a cost burdened lifestyle.

Amended Paragraph

H 4.2 Support future housing growth and infill development in designated activity centers by encouraging the highest planned density at sites, with a variety of housing types to meet regional housing targets, to reduce traffic congestion and reduce commuting costs for residents, especially for residents when housing costs result in a cost burdened lifestyle.

Explanation: There are few, if any, true transit corridors in western Prince William County. Higher density mixed-use projects in the Activity Centers will generate the densities that can support future transit.

Current Language:

H4.6 Track the number of dwelling units built annually within ½ mile of transit to measure progress toward the goal of providing 75% of new housing with multimodal access.

Amended Paragraph:

H 4.6 Track the number of dwelling units built annually within ½ mile of transit and any non-residential or employment uses to measure progress toward the goal of providing 75% of new housing with multimodal access.

Explanation: Gathering information near transit and employment centers will provide important data.

Current Language:

H5.2 Promote mixed-use, well connected, and walkable neighborhoods that are resilient communities with lower carbon emissions. Consider enhanced Design and Construction Standards Manual (“DCSM”) requirements to mitigate impacts from the construction and infrastructure projects, especially on water quality.

- Encourage compact growth to improve the environmental performance of site and building development.

- Redevelopment of existing sites allows for the adoption of modern stormwater controls, especially on sites characterized by a high proportion of impervious surface cover.
- A compact form of infill development or redevelopment can reduce stormwater runoff and heat island effect by using green infrastructure, green roofs, and other green cover, as well as building design and orientation to reduce urban temperatures.

Amended Paragraph:

H 5.2 Promote mixed-use, well connected, and walkable neighborhoods that are resilient communities with lower carbon emissions. Consider enhanced Design and Construction Standards Manual (“DCSM”) requirements to mitigate impacts from the construction and infrastructure projects, especially on water quality.

- Encourage compact growth to improve the environmental performance of site and building development.
- Redevelopment of existing sites allows for the adoption of modern stormwater controls, especially on sites characterized by a high proportion of impervious surface cover.
- A compact form of infill development or redevelopment can reduce stormwater runoff and heat island effect by using green infrastructure, green roofs, and other green cover, as well as building design and orientation to reduce urban temperatures.
- During the entitlement process, encourage densities at the highest planned density in the Land Use category where consistent with the comprehensive plan.

Explanation: The Land Use plan is a plan that incorporates the overall projected growth of the County and requirements of density to fill to accommodate that growth. If density is decreased in every plan submitted the Comprehensive Plan will fall far short of the required housing necessary to meet population growth projections and continue to create a housing shortage and drive up costs.

Current Language:

H 6.13 To help reduce food insecurity and support healthy eating, encourage applicants of development projects to include an analysis that demonstrates multi-modal accessibility to food and food assistance programs to reduce establishing new housing communities in areas with limited access to food sources.

Amended Paragraph:

NVBIA ♦ 3684 Centerview Drive ♦ Suite 110-B ♦ Chantilly, VA 20151
703-817-0154 office
www.NVBIA.com

H 6.13 To help reduce food insecurity and support healthy eating, encourage applicants of development projects to demonstrate accessibility to food and food assistance programs based on the County Completed Food Security Study to reduce establishing new housing communities in areas with limited access to food sources.

Explanation: Residential development or re-development attracts, but in most cases cannot provide, additional grocery stores. Grocery stores locate in areas where high density development is present.

Current Language:

H 7.7 Explore the Board of Supervisors' options to rezone low density areas, where housing supply is low, to provide alternatives to accommodate future population growth as projected by the Metropolitan Washington Council of Governments by 2040.

Amended Language:

H 7.7 Explore the Board of Supervisors' options to rezone low density areas, where housing supply is low, to provide alternatives to accommodate future population growth at densities that permit economically viable development of attainable housing.

Explanation: One key to providing affordable housing is small lot development. Continued large lot development is contrary to an effective ADU strategy.

Appendix A: Delete "should apply" as that language is mandatory, not voluntary.

Amended Paragraph:

Background It is the intent of the Board of Supervisors of Prince William County that affordable housing opportunities be available to all who live or work in Prince William County to purchase or rent safe, quality, affordable housing within their means. An Affordable Dwelling Unit (ADU) Ordinance serves as a guide for the development of ADUs primarily through the development process. This supplement is intended to provide guidance on creating affordable housing through the residential and mixed-use rezoning application process. These policies provide greater flexibility that encourages and incentivizes the voluntary creation of affordable housing and helps the development community align their project with county values and address the site and financing constraints. The following guidelines are intended to encourage the development of affordable dwelling units across all cost bands to

meet the need of County residents including the needs of the work force community and our most vulnerable populations.

Explanation: Affordable housing can be achieved through voluntary proffers. While guidance can be provided, it must be done in a way that does not obviate the voluntary nature of proffers and that meets applicable law.

Delete “Proffer Guidelines” and substitute “Guidance for Increased Density” to address the concerns raised by the *Koontz* case and to provide flexibility.

Amended Paragraph:

Guidelines for Attaining Increased Density:

The following guidelines provide a voluntary flexible framework to support the viability of providing affordable housing in residential rezoning applications. Each project will need to be assessed contextually within the parameters of the applicant’s goals and the context of the surrounding community to ascertain the needs of the geographical area. The analysis should result in supporting the desired outcome of supporting a variety of housing options throughout the County.

Explanation: Applicable law requires that proffers must be voluntary without any coercion and be evaluated on a case-by-case basis.

Affordable Share
And Income

Level: Affordable Share – All new housing developments are encouraged to incorporate a minimum of 20% of affordable housing units into the development to create economically integrated communities

Amended Paragraph:

Affordable Share – All new housing developments are encouraged to incorporate a minimum number of affordable and/or workforce housing units that are appropriate to the development to be rezoned based upon the size of the project, the type of units (e.g. high rise v. garden apartments), unique development costs and proximity to mass transit and food sources withing a range of 5% to 20% at an AMI level that enables capital providers to meet their risk/return objectives.” (See H 3.5)

Explanation: The 20% ADU level is not economically feasible for most projects. ADU proffers are supposed to be voluntary and should be determined on a case-by-case basis based on impact, nexus and proportionality. This language provides the flexibility to the County to allow for Affordable Housing at different levels based on the projects being proposed versus a one size fits all approach.

Incentives: “Eliminate monetary contributions for mitigation of offsite development impacts for affordable units and workforce units.

Amended Paragraph:

Incentives – The following incentives will be considered for providing affordable/workforce housing but is not intended to be an exhaustive list.

- Density increases above the top of the density range recommendations in the Comprehensive Plan proportionate to the amount of affordable/working units provided.
- Flexibility in the types of units allowed in the zoning district • Modifications of development standards such as height, setback, or lot coverage
- Modifications of Design and Construction Standards Manual (DCSM) should be evaluated on a case-by-case basis for affordable projects, and design flexibility may be appropriate to
- Eliminate monetary contributions for mitigation of offsite development impacts for affordable units and workforce units.

Explanation: The lack of affordable housing is a complex problem and numerous strategies must be utilized. Eliminating monetary contributions on affordable units reduces the cost to produce those units and make projects that include them more economically viable

Replacement

Housing: Delete as this will prevent the redevelopment of areas that need revitalization and rely on the “Guidance for Increased Density” provisions.

Amended Paragraph:

Replacement Housing: Where existing, naturally-occurring, affordable housing is proposed to be removed to make way for new development, encourage development proposals to incorporate similar levels of affordable housing opportunities for current or new residents by allowing increased density to incorporate attainable housing opportunities.

Explanation: The goals of redevelopment and affordable housing must be reconciled in a way that encourages both. This can only be done by encouraging densities that will spur redevelopment and affordable housing. However, each location is different and the policy must be flexible.

Rebecca & Alex

Please find attached NVBIA consolidated comments on the Pathway to 2040 Comp Plan Chapters. Please note that we have tried to make it easy by referencing the exact text indicated and what issues would arise to make your tasks easier in reviewing.

We would really like to meet on this ASAP as we will be discussing these issues with the Supervisors and wanted to make sure we had a chance to sit with you and relevant staff to talk through these and make sure our position is clear and how we view the impacts of the text on the overall County's future development.

Do you have time for a meeting Monday so we can review these together? (I have copied Melody as I think she manages your schedule?)

Subject: Comp Plan Chapter Comments

This email is from an EXTERNAL source. Use caution when replying or clicking embedded links.

Good morning Rebecca I heard you were not feeling well, praying that it's a passing illness and that you feel better soon!

I wanted to let you know that I have asked teams if NVBIA members to review the Comp Plan draft chapters and we will be forwarding to you next week some comments on the Housing, Land Use, Sewer and Mobility chapters.

There are some issues we have noted that reduce flexibility in land use decisions as an example in the land use chapter there is language that doesn't allow for creativity in bringing forth good communities, one such example is not including PMR under the implementing zoning for T2 transects but there are many others.

When you are feeling better is there a time we can designate for a meeting with yourself and Alex and other staff you designate to meet and go through the suggestions?

Thanks

Pathway to 2040

NVBIA Consolidated General comments on August 2022 Draft Mobility Plan

09/21/2022

- Action Strategy TR5.9 encourages development around transit nodes. Not sure if the Land Use chapter has mechanisms to aid/enforce this, but it would make sense to include.
- Consistent with the multi-modal focus, TDM is discussed in some detail, but no minimum mode splits or other thresholds are given (other than bike parking minimums at County facilities).
- Appendix A (Level of Service)
 - (RP7.1) Evaluate LOS to achieve a minimum appropriate for the roadway classification and surrounding land uses. Previously, LOS “D” was the Comprehensive Plan minimum acceptable level of service; however, ***“the County recognizes that it is not possible to “buy” our way out of congestion through road investments alone, and has reduced the acceptable standard in the Mobility Chapter to LOS E. This standard better aligns with the multimodal focus of the chapter by allowing for reduced levels of service in areas where there are alternative transportation options, including transit.”*** . This draft also discusses that the previous standard included “non-degradation” where developments were expected to not deteriorate the LOS if it was already below LOS D. However, the new draft does NOT indicate that policy will continue, nor does it say that non-degradation is eliminated. Naturally, clarification is needed in the document on whether non-degradation will or will not continue. (Page 76)
 - Appendix A acknowledges that metrics associated with multimodal performance – *this is currently absent from the Chapter*
 - Appendix A references the complexity of seeking DRPT/VDOT approval of multimodal (complete streets) within Small Area Plans and has elected not to do so at this time, although the Plan follows current DRPT Guidelines – *this has implications on the ability of VDOT to accept new streets planned in conjunction with DRPT multimodal principals. VDOT will not accept new streets unless the proposed street elements are reviewed/approved as part of a Multimodal System Plan. Industry should lobby for VDOT to review/streamline its multimodal system acceptance process and encourage County/VDOT to work together to ensure there is appropriate buy-in between County/State authorities where multimodal design standards are proposed.*
- Appendix C (Congestion Management)
 - Appendix C describes Transportation Demand Management (TDM) as a means to reduce vehicle trips and commitments to TDM would allow for trip generation credits pursuant to the DCSM. However, TDM strategies “must always be given a quantifiable measure of effectiveness, as well as alternative solutions in the event their strategies are not successful.” – *this is a significant impediment for projects to consider TDM. “Alternative solutions” have typically involved setting aside land (limiting developable area) to allow for roadway capacity improvements if the TDM goals are not meant. There has been little incentive for TDM to be considered since developments are expected to plan for improvements (without TDM) anyway. The County needs to be invested in TDM as a viable means to reduce trips and meet the stated objectives of the proposed Mobility Chapter.*

PRINCE WILLIAM COUNTY

Sanitary Sewer

Draft: August 2022

INTENT

The intent of the Sewer Chapter is to facilitate the provision of economically feasible and environmentally sensitive systems of wastewater and sewage collection, conveyance, and treatment to serve residents of Prince William County. This Chapter is provided to guide the sewer infrastructure needed to serve the existing and proposed development, as reflected in the Long-Range Land Use Chapter and Map, and ensure compliance with the Occoquan Policy, the Potomac Embayment Standards, and Virginia Department of Health Sewer Regulations.

Additionally, this Chapter is provided to address existing and potential conditions that could otherwise adversely impact the natural environment and public health, safety, and welfare of County residents. Adequate wastewater treatment is an essential service to which all County residents should have access through public sewer providers or through individual-lot onsite septic systems.

All County residences whether new build or existing structures shall have access to public sewer as identified in Figure I (Public Sewer Map). The cost of any extensions/connections to the public sewer system shall be borne by the property owners connecting to the sewer system. However, extension of public sewer should not be used as justification for increasing the residential densities that are shown on the Long-Range Land Use Chapter Map for a given area. The primary providers of public sewage collection and treatment to the County are the Prince William County Service Authority and Virginia American Water.

When access to the public sewer is not available or cost prohibitive due to the property's distance from the nearest sewer main onsite septic systems are appropriate when there is adequate space and the soil conditions to permit such a system. Onsite systems can be provided in both conventional systems and alternative onsite sewage systems "AOSS", which utilize a variety of treatment methods to better adapt to specific onsite conditions. The Sewer Chapter discourages decentralized onsite sewerage systems, where more than one lot is to share such a system.

Public sewer is planned and mapped Countywide to provide equitable access to sewer services. New development within the Urban and Suburban Communities, as designated in the Long Range Land Use Chapter, should occur with the provision of public sewer facilities. Within the Rural Communities, as designated by the Long-Range Land Use Chapter, voluntary uses of onsite septic systems is permitted and encouraged when access to public sewer is not available and cost prohibitive due to the property's distance from the nearest sanitary sewer main. The cost of any extensions/connections to a public system will be borne by the property owners connecting to the system.

SEW-POLICY 1: Continue sewer system planning so that the costs of system expansions and increases in system capacity will continue to be borne, where consistent with applicable law, by new development.

SEW 1.1. Require new development served by public sewer to fund the capital costs associated with expanding sewer facilities, including line extensions and plant capacity expansions, as required for its project, in coordination with the Prince William County Service Authority and in conjunction with the Long-Range Land Use Chapter.

SEW 1.2. Where **appropriate and accessible**, the Prince William County Service Authority **shall make reasonable efforts to** allow connection for existing structures along the length of proposed sewer lines; however, **no guarantee of service will be made and** no increase in capacity beyond that shown on the Long-Range Land Use Chapter Map should be provided.

Page 3 of 5

Draft August 2022

SANITARY SEWER

SEW-POLICY 2: Ensure adequate sewer capacities needed to support planned growth throughout the County, in accordance with the densities, intensities, and locations for new development – as shown in the Long-Range Land Use Chapter and Map.

ACTION STRATEGIES:

SEW 2.1. Continue to coordinate with the Prince William County Service Authority to revise the sewer plans for the County based on the Long-Range Land Use Chapter and Map. An analysis – including but not limited to, the following subjects – should be incorporated into the Sewer Chapter following adoption of each five-year update of the Comprehensive Plan, where Comprehensive Plan policies, Long-Range Land Use Chapter designations, or development densities are amended and would have a direct impact upon existing sewer plans.

SEW 2.1.a Potential shortfalls in sewer capacities and proposed methods for addressing identified shortfalls.

SEW 2.1.b Identification of capital needs, based upon identified shortfalls in sewer capacities and identification of potential funding sources. This analysis should consider the relevancy of phased construction as a means to address capital needs.

SEW 2.1.c Analysis and recommendations regarding the provision of public sewer service to users of small private sewage treatment plants, decentralized onsite sewerage systems that serve more than one lot and onsite sewerage systems. These facilities may already be existing in locations designated Agriculture and Forestry (AF) on the Long-Range Land Use Chapter Map or in other locations, such as for certain public buildings and sites.

SEW 2.2. **Require existing structures, where an existing onsite sewer system has failed and where it has been determined by the Health Department that no onsite remediation is possible, and where the property line is located within 300 feet of a public sewer line with adequate capacity, to connect to such line.**

SEW 2.3. Plan for adequate facility capacity allocations from the Upper Occoquan Service Authority to meet projected needs of Prince William County within its service area.

SEW 2.4. Expand treatment plants to accommodate projected need as reflected by the Long-Range Land Use Chapter Map.

SEW 2.5. Plan and coordinate with Virginia American Water to accommodate projected needs within its service area, as reflected by the Long-Range Land Use Chapter Map.

- SEW 2.6.** Plan, design and construct sewer facilities only in accordance with the densities, intensities, and locations for new development that are shown on the Long-Range Land Use Chapter Map.
- SEW 2..** Evaluate the existing Design and Construction Standards Manual “DCSM” standards for average daily wastewater flow by land use type at least every five years.

- SEW 2.8.** Evaluate and update, if necessary, the Design and Construction Standards Manual “DCSM” and the Prince William County Service Authority’s Utility Standards Manual “USM” for consistency of requirements.
- SEW 2.9.** Monitor and map failures, as determined by the Health Department, to existing onsite sewerage systems, to determine the need for future extension of public sewer facilities. Such future extension, however, should not be a reason to increase residential densities above those specified on the Long-Range Land Use Chapter Map.
- SEW 2.10.** Prepare a standard policy and regulations to require existing and future development to install appropriate pre-treatment facilities, in accordance with the Prince William County Service Authority or Upper Occoquan Sewer Authority Pretreatment Regulations or Policies, and to connect to public sewer facilities if such development is – or promotes – a health hazard.
- SEW 2.11.** Maintain an inventory of local sewage systems – small private sewage treatment plants, alternative sewerage systems, and onsite sewerage system – throughout the County.
- SEW 2.12.** Discourage the use of privately owned and privately operated treatment plants for new development projects.
- SEW 2.13.** Develop a Wellhead Protection Program and Groundwater Recharge Zone Protection Program – utilizing procedural guidelines and information available from the U.S. Environmental Protection Agency and the Virginia Groundwater Protection Steering Committee – to protect or improve the groundwater quality and prevent well contamination from faulty or improperly located private waste disposal systems.
- SEW 2.14.** Utilize the Existing and Projected Sanitary Sewer Facilities Map to identify the general or approximate location, character, and extent of the features shown thereon. Such features should be planned, sited, and buffered to provide compatibility with surrounding existing and planned land uses, and should meet the appropriate policies and action strategies of the Community Design Chapter and the Long-Range Land Use Chapter.
- SEW 2.15.** Continue to update County’s sewer ordinances, pretreatment regulations, and/or policies, as appropriate.
- SEW 2.16.** Investigate the feasibility of obtaining grant funds for use by the Prince William County Service Authority for sewer extensions to areas with a high potential for onsite waste disposal system failure.
- SEW 2.17.** **Within the Rural Communities, as identified in the Long-Range Land Use Chapter, encourage the use of individual-lot onsite sewerage systems.**

STAFF REPORT

Meeting Date:	September 28, 2022
Agenda Title:	Comprehensive Plan Update: Pathway to 2040
District Impact:	Countywide
Requested Action:	Recommend Adoption of Comprehensive Plan Amendment #CPA2018-00007, Land Use Chapter Recommend Adoption of Comprehensive Plan Amendment #CPA2018-00006, Mobility Chapter Recommend Adoption of Comprehensive Plan Amendment #CPA2022-00001, Housing Chapter Recommend Adoption of Comprehensive Plan Amendment #CPA2022-00002, Sanitary Sewer Chapter Recommend Adoption Comprehensive Plan Amendment #CPA2023-00001, Electrical Utility Services Plan
Department:	Planning Office
Staff Lead:	David McGettigan Sr., AICP

EXECUTIVE SUMMARY

In response to the Board of County Supervisor initiating amendments to update several chapters of the Comprehensive Plan, this is a request to recommend adoption to the following Comprehensive Plan Chapter updates.

- **Comprehensive Plan Amendment #CPA2018-00007, Land Use Chapter:** This is an update to amend the Land Use Chapter of the Comprehensive Plan. The intent of the Land Use Chapter is to provide a development vision showing how the County will utilize its land resources to accommodate future development in an efficient and sustainable way. **Countywide**
- **Comprehensive Plan Amendment #CPA2018-00006, Mobility Chapter:** This is an update to amend the Transportation Chapter of the Comprehensive Plan. The intent of this Mobility Chapter is to provide an accessible, safe, comprehensive, multimodal transportation network that allows for the safe and efficient movement of goods and people throughout the County and into surrounding jurisdictions. **Countywide**
- **Comprehensive Plan Amendment #CPA2022-00001, Housing Chapter:** This is an update to replace the Housing Plan of the Comprehensive Plan. The intent of the Housing Chapter is to provide guidance for the development of new residential communities while addressing affordability concerns. **Countywide**
- **Comprehensive Plan Amendment #CPA2022-00002, Sanitary Sewer Chapter:** This is an update to amend the Sanitary Sewer Plan of the Comprehensive Plan. The intent of the Sanitary Sewer Chapter is to facilitate the provision of economically feasible and environmentally sensitive systems of wastewater and sewage collection, conveyance, and treatment to serve residents of Prince William County. **Countywide**

- **Comprehensive Plan Amendment #CPA2023-00001, Electrical Utility Services Plan:** The Electrical Utilities Services Plan is a new section of the County's Comprehensive Plan. Previous policy was embedded in a section of the Long-Range Land Use chapter. Given the growth of industry that requires extensive electrical power, a separate chapter was necessary. **Countywide**

It is the recommendation of staff that the Planning Commission recommend adoption of the Comprehensive Plan Amendments listed above to the Board of County Supervisors.

BACKGROUND

- A. Comprehensive Plan Amendment (CPA) – Under Section 15.2-2229 of the Code of Virginia, the Board of County Supervisors may consider amendments to the adopted Comprehensive Plan.

- B. Comprehensive Plan Update Initiation – The current Comprehensive Plan Update is based on the Board of County Supervisors initiation from August 3, 2016, as was later amended, which includes the following scope of work:
 - 1. Thoroughfare Plan Update (Roadway)
 - 2. Technical Review to Update Population and Employment Forecasts
 - 3. Economic Development Plan Update
 - 4. Urban Development Areas (UDA)
 - 5. Levels of Service Standards
 - 6. Incorporate Existing Studies
 - a) COG Regional Activity Centers Study
 - b) Potomac Communities Design Guidelines
 - c) MCB Quantico Joint Land Use Study
 - d) Rural Preservation Study
 - e) Cockpit Point Battlefield Study
 - f) Dale City Design Guidelines
 - g) VRE Studies
 - h) Bristoe Station and the Kettle Run Battlefields Preservation Study
 - 7. Small Area Plans
 - a) North Woodbridge
 - b) Parkway Employment Center
 - c) Innovation
 - d) Fairgrounds/New Dominion Area
 - e) Independent Hill
 - f) Triangle
 - g) Yorkshire
 - 8. Prior Board directive to staff to address critical issues facing the County in its work on the Comprehensive Plan update include:
 - a) Affordable Housing Policies within the Land Use Chapter.
 - b) Social Equity and Environmental Justice
 - c) Sustainability
 - d) Senior Services
 - e) Ensure Land Uses Reflect Commercial and Industrial Market

- f) Realities of the Office Market
- g) Address Land Use Incompatibilities
- h) Bethlehem Road Corridor
- i) Power Infrastructure Planning
- j) Multimodal Transportation and Land Use Planning
- k) Impacts of New Transportation Technologies (autonomous vehicles, etc.)

On July 13, 2021, the Board of County Supervisors expanded the scope of work to include initiating the Housing Chapter, Sanitary Sewer Chapter, Electrical Utility Service Plan. In addition, new Zoning Ordinance and County Code Amendments to create an Affordable Dwelling Unit Ordinance and the Conservation Residential Zoning Text Amendment to support the Comprehensive Plan were included as part of the expanded scope.

- C. Projected Growth – The Comprehensive Plan must accommodate the projected growth and development of the County. Projected growth is based on the Metropolitan Council of Governments Cooperative Forecasts of Households, Population and Employment. Long-range forecasts provide data necessary for analyzing the effects of growth, developing policy responses to regional issues, ensuring air quality conformity of transportation plans, and determining the demand for public facilities. Based on COG Round 9.2 forecasts the 2040 Household projection for Prince William County is approximately 191,833 households (today approx. 156,760). In terms of population although COG 9.2 forecast a population of approximately 582,700, more recent information from the 2020 Census, which shows a higher average household size and higher occupancy rate, would revise the population estimate up to 594,927. Employees working in Prince William County would grow from a 2020 baseline of approximately 147,920 to 240,868 by 2040.
- D. Key Scope Items of the Comprehensive Plan Update – The following items were addressed in the Comprehensive Plan Update based on the initiation and several directives issued to staff.
 - 1. Equity, Environmental Justice, Sustainability
 - a) Staff was directed to address equity and sustainability as part of the Comprehensive Plan update. Specific policies can be found in the Land Use, Housing and Mobility Chapter. For instance, Land Use Policy 15: Identify and acknowledge communities that may not have equitable access to amenities, resources, or opportunities to better understand existing conditions as well as the area's history while directing planning efforts to address these deficiencies. Another example is Land Use Policy 17: Promote sustainable land

development that provides for a balance of economic opportunity, social equity including environmental justice, and protection of the natural environment.

2. Holistic and Cohesive view of the County-

- a) Staff was directed to take a holistic and cohesive view of the entire County (all seven magisterial districts) when looking at the Comprehensive Plan, Land Use chapter, to make sure that the Land Use reflects a desire to increase commercial and industrial land. Planning staff working with a consultant to develop the Land Use plan based on looking at the County holistically which includes the introduction to a new transect system that covers the rural to urban spectrum and introduces new rural placetypes and environmental protection classifications and overlays.

3. Alignment with other plans-

- a) Strategic Plan – On July 20, 2021, the BOCS adopted the 2021-2024 Strategic Plan that seeks to significantly expand the County's commercial tax base. The 2021-2024 Strategic Plan is available on the County's website at www.pwcva.gov/strategic-plan. Each of the chapters of the Comprehensive Plan Update considered the goals associated with the 2021-2024 Strategic Plan. For instance, focus areas of a Resilient Economy, Environmental Conservation, Sustainable Growth and Transportation and Mobility are all addressed through the policies and action strategies in the Land Use, Housing, Mobility, Sanitary Sewer and Electrical Utility Service Plan to some degree to ensure alignment.
- b) Small Area Plans- The adopted plans include North Woodbridge Small Area Plan, The Landings at Prince William Small Area Plan, Dale City Small Area Plan, Innovation Park Small Area Plan, Independent Hill Small Area Plan, and Triangle Small Area Plan. To ensure the new Long-Range Land Use classifications align with the land uses in the adopted small area plans, the small area land use maps were updated to reflect the new classifications that are both compatible and consistent with the recommended land uses of each small area plan.
- c) Other adopted Plans within the Comprehensive Plan - The recently adopted plans include the Technology and Connectivity Plan, Safe and Secure Communities Plan, Parks, Recreation and Tourism Plan, and Community Education Plan. Each chapter of the Comprehensive Plan Update considered consistency of policies where applicable to these adopted plans.

- d) Other studies - Several studies including Cockpit Point Battlefield Study, Bristoe Station/Kettle Run Battlefield Study, and the MCB Quantico Joint Land Use Study were considered in the development of land use classifications and policies in the Land Use Chapter update to further the objectives of these study areas.

E. Highlight of Changes Made to the Land Use Chapter – The Land Use chapter provides a development vision as to how the county will utilize its land resources. The chapter will provide a rational basis for local land use decisions with a twenty-year vision for future planning and community decisions that help guide future development and re-development decisions made by the Board of County Supervisors. The Land Use chapter has incorporated new elements into the Comprehensive Plan resulting from Board of Supervisor’s directives, community input and stakeholders feedback balanced with information on growth patterns, population trends, mobility, affordable and variety of housing choices, the environment, cultural and natural resources. One of the new elements introduced into the Land Use chapter is the incorporation of a vision and quality of life values. To further strengthen the Comprehensive Plan, new concepts have been added including equity and sustainability as well as new policies and action strategies designed to complement and provide alignment with the cultural resources, economic development, housing and mobility chapters of the Comprehensive Plan. The new chapter replaces the Land Use chapter, Economic Development chapter, and all the remaining Sector Plans. The Electrical Transmission Line action strategy and figure from the previous Land Use chapter have been replaced with a more detailed Electrical Utility Service Plan and moved to Utility Chapter of the Comprehensive Plan.

A major change with the Land Use chapter is the establishment of placetypes into the Comprehensive Plan which include multimodal districts, centers and corridors. The Land Use chapter specifies policies and guidelines for several Activity Centers and Redevelopment corridors situated throughout the County. Within the placetypes section of the chapter, new concepts are introduced including Adaptive Reuse, Infill Development and Complete Neighborhoods. Several of the Sector Plans from the previous Land Use Chapter will become either Activity Centers (such as the Government Center or the I-66/Route 29), a village (as in the case of Nokesville), or a combination of Activity Centers, Redevelopment corridor or part of the small area plans (for instance Potomac Communities) to reflect consistency with a more flexible designation established in the overall Land Use Plan.

Another significant change is the framework for the Long-Range Land Use plan which introduces the concepts of transects associated with streamlined new land use categories. In essence, the higher transects (T-4 through T-6) make up the Urban Communities also known as the Urban Development Areas as required in Sec. 15.2-2223.1 of Virginia Code, Ann. Development with the highest transects near VRE Stations or other forms of transit are the Transit Oriented Development areas as

required in Sec. 15.2-2223.4 of Virginia Code, Ann. The middle of the transect spectrum (T-2 through T-4) make up the Suburban Communities. The lower transects (T-0 through T-1C) make up the Rural Communities. Several Long-Range Land Use classifications have been retired and replaced with a suite of new more robust designations that provide either greater flexibility in areas to encourage development or designed to preserve open space in environmentally sensitive areas. Four Long-Range Land Use classifications have been retained as these designations either are countywide land uses (such as Public Land, Parks & Open Space, County Registered Historic Site) or Residential Planned Community which continues to meet the specific needs of residential and non-residential uses in the county.

This Plan also proposes three land uses categories to define the County's rural communities. The rural communities are designed to provide distinction between strictly residential communities, mixed use communities and areas of opportunities to enhance preservation while maintaining the unique character associated with each of these respective areas. Three new rural placetypes include Villages, Hamlets, and Conservation Residential Neighborhoods. Within the Land Use Chapter, Villages are compact areas with a mix of uses (including residential, commercial, civic/institutional, and potentially other land uses) that serves as a focal point for the surrounding rural area while accommodating a limited amount of future growth that is contained within its boundaries. Nokesville is the only village identified in the Plan. Hamlets are compact areas with a limited mix of uses (e.g., small-footprint retail, civic/governmental, residential, recreational) that are often built as part of a historical core with a small-scale mix of uses at a central crossroads. The Land Use Chapter identifies five hamlets; Brentsville, Catharpin, Greenwich, Lake Jackson, and Woolsey. Conservation Residential uses are arranged in a compact development pattern that protects surrounding natural resources, cultural resources, open space, and scenic and agricultural lands. Residential Neighborhoods are those existing residential communities built in the rural area. The Agriculture and Forestry classification identifies mostly agricultural and forestal lands meant to be retained for future growth beyond the 2040 horizon of the plan. To protect and preserve the environmentally sensitive mid-county area a new Occoquan Reservoir Protection Area is designated to limit impacts to environmental resources and protect a major source of public drinking water.

To further enhance the ability to protect natural resources such as steep slopes, streams and floodplains; the Environmental Resource land use classification will become a Comprehensive Plan designation overlay called the Environmental Resources Protection Overlay. Equally important to the preservation of environmental resources and providing connectivity of open spaces throughout the County, open space corridors are introduced into the Land Use Map.

Lastly, policy changes have been made to the Public Facility Review and Comprehensive Plan Amendment processes.

- F. Highlight of changes made to the Housing Chapter – The Housing Chapter consists of guidance for the development of new residential communities while addressing affordability concerns in accordance with Sec. 15.2-2223.5 of Virginia Code, Ann. The Housing Chapter update took a holistic approach to policies and action strategies that aligned more comprehensively with the planning principles contained in the Comprehensive Plan.

The region is facing an unprecedented demand for new housing, which significantly impacts our County. Understanding the diverse needs of the community and the ongoing demographic drivers provided guidance for the development of urban, suburban, rural placetypes in the Land Use chapter.

Housing is a key component to achieve the County's vision of being a community of choice for all residents. The chapter addresses housing needs and affordability concerns and ensures that the implicit connections with mobility, environment, health, and equity are addressed to support the building of healthy equitable communities. The chapter promotes a diversity of housing styles and price points to promote communities for residents during all phases of their life and across all income bands.

As such the guiding principles of the chapter include:

- Encouraging quality, price-appropriate housing, which is housing that costs 30% of the household's annual gross income or less, that meets the needs of all current and future residents.
- Implicit in this idea of attainability is the idea that a range of housing options (type, size, tenure, cost) should exist in the local market for a range of household income bands and preferences to support existing and new residents regardless of income.
- Housing is directly tied to public policy priorities such as economic development, education, transportation, environment, and health.

To achieve this vision, seven guiding policies are included in the chapter:

- Preserve and enhance existing neighborhoods
- Promote diverse mixed income housing communities
- Develop implementation tools for both residents and the development community to provide for the construction and financing of affordable dwelling units
- Strategically locate diverse housing types near transportation, services, and employment centers to build equitable comprehensive multimodal communities and reduce associated transportation expenses for cost burdened residents
- Foster environmentally sustainable housing communities

- Design a community's built environment in a manner that positively influences the physical and mental health of its residents based on the guiding principles of equity, quality, stability, accessibility, affordability, and location.
- Identify regulatory changes that are innovative and streamline processes to support the implementation of housing policies including affordability, universal design and accessibility enhancements.

G. Highlight of Changes Made to the Mobility Chapter - The Mobility Chapter updates what was formally known as the Transportation Chapter of the Comprehensive Plan, which had its last major update in 2010. The Mobility Chapter considers all major transportation modes and provides a renewed focus on safety, equity, sustainability, resiliency, and emerging technologies. Primary changes from the previous Comprehensive Plan include a new format to include new Policies/Action Strategies, the Roadway Plan, Transit Section, Active Mobility and Recreational Trails Section and supporting Appendices.

The Active Mobility and Recreational Trails section was previously in the Transportation chapter-Non-motorized section, the Parks and Recreation chapter-Trails Plan, and the Open Space chapter. It replaces the Non-motorized Section and Trails Plan and updates the Open Space map. One major change includes the inclusion of all trails into this section to include recreational trails.

The Policies and Action Strategies Section has been modified and expanded to include all aspects of mobility and to include new action strategies that promote safety, equity, sustainability, resiliency, and emerging technologies while supporting other chapters of the Comprehensive Plan.

The Roadway Plan updates what was previously known as the Thoroughfare Plan to include new roadway projects and recommendations. The draft Roadway Plan reduces the lane miles by 30 miles. Lane miles are used to measure the total length and lane count of a given highway or road. The County cannot construct its way out of congestion in the future. Smart growth with development in Activity Centers that encourages people to live, work and play in the same vicinity to be able to take advantage of walking/transit options is the goal of the updated Comprehensive Plan. The only widening that is recommended is Pageland Lane from two to four lanes between Sudley Road and Route 29, to support additional development planned for that corridor. Two extensions of existing roads, Heathcote Blvd. and Purcell Road East (termed Peaks Mill Road) are included. Several roads were removed from the Plan due to changes in land use (secure facilities). Others in the area bordered by Rt. 29, Old Carolina Road and Somerset Crossing Road were removed or down planned from four to two lanes due to a change in land use and policy.

The Transit Plan has been updated to include the Transit Connectivity Map to include potential transit connections between Activity Centers, Small Area Plans, and Redevelopment Corridors that support the new Land Use Chapter. Links for OmniRide and VRE schedules, stops and plans which are consistently updated, were included to provide dynamic information to residents. The Future Transportation Alternatives Map has been updated to include regional plans.

The Level of Service (LOS) rating system to measure traffic congestion on roadway segments, intersections and entire urban areas is used as a benchmark for the success of regional and local transportation roadway networks. The fundamental reason that state and local governments plan new or widen roads is to improve LOS during the peak hours, which creates roads that may be underutilized during the rest of the day.

While congestion is a considerable problem, it is not the County's only problem. The County has recognized the need for multimodal levels of service through the Strategic Plan's Mobility Goal to "have an accessible, comprehensive, multi-modal network of transportation infrastructure that supports local and regional mobility." One of the objectives to achieve this goal recognizes the need to build a robust economy and to provide more job opportunities within the County to help reduce commute times and congestion issues. In order to implement the goals of the Comprehensive Plan, the County needs new performance measures to measure accessibility, economic development, sustainability and livability. This requires less reliance on achieving a specific LOS, and more reliance on creating a sense of place with measures related to economic, social and environmental outcomes, where people live, work and play in the same geographic area and accept that congestion is expected in the County's Activity Centers and on primary roadways.

- H. Highlight of Changes Made to the Sanitary Sewer Chapter - The Sewer Chapter contains new policies and action strategies to allow public sewer countywide.
- I. Highlight of Changes Made to the Electrical Utility Service Plan - The Electrical Utilities Services Plan is a new section of the County's Comprehensive Plan. Previous policy was embedded in a section of the Long-Range Land Use chapter. Given the growth of industry that requires extensive electrical power a separate chapter was necessary. This chapter contains three policies followed by action strategies to further define the planning effort.
- J. Additional proposed text language change-
 - 1. Adding R-16 and R-30 to the Implementing Zoning Districts in T4 & T5 for MU as long as it contributes to achieving the goal of creating a mixed- use district.
 - 2. Add language to the MU districts that encouraging affordable housing similar to the RN District.

3. Clarifying that the affordable housing incentive to allow different unit types in Appendix A: Affordable Housing Supplement of the Housing Chapter could be implemented by allowing multifamily zoning districts like R-16 and R-30 to be used in the transects T-4, T-3, T-2 with appropriate buffering and design in accordance with the bonus density applicable to each transect.

K. Overview of Land Use Change Requests - During the review of all long-range land use designations countywide, long-range land use change requests were accepted, including those associated with residential-only land, if submitted by May 12, 2021. All submissions received by close of business May 12, 2021, were considered for review as part of the Land Use update of the Comprehensive Plan Update. Planning staff received a total of 36 applications consisting of approximately 1,870 acres for consideration in Long-Range Land Use Map change request. Of the 36 applications, the following summary indicates the grouping of applications based their status on consistency with Land Use Map.

- 18 applications were consistent.
- 3 applications were consistent, but the applicant is requesting higher density.
- 1 application is not consistent.
- 14 were determined to be related to the PW Digital Gateway CPA and were transferred for consideration to that respective project.

The applications that were not consistent with draft Land Use Map are included as an attachment, "Table of Requests Inconsistent with the Land Use Map", for the Planning Commission consideration.

L. Annual CPA Initiation Requests - The Planning Office received 11 Comprehensive Plan Amendment initiation requests as part of the 2022 Annual Review consideration. Based on the proposed Land Use Map, 6 applications are consistent, 2 are partially consistent (applicant is asking for higher densities on a portion of the map) and 3 are not consistent and would require a subsequent CPA initiation. A summary of the CPA applications and consistency with the proposed Land Use Map can be found below:

Summary of Annual CPA Requests (not Initiated)				
CPA	Magisterial District	Agent / Applicant	Proposal	Proposed Land Use/ Consistent
<p>Balls Ford Road Assemblage</p> <p>CPA2022-00004</p> <p>GPINS: 7697-45-0774 7697-45-3574 7697-45-9385 7697-64-4685</p>	Gainesville	<p>Brian Prater Jonelle Cameron Walsh, Colucci, Lubeley & Walsh</p> <p>Ballsford Office Campus Two, LLC, Ballsford Office Campus Three, LLC, and Linden Investors, LLC</p> <p>Concurrent REZ will be filed upon CPA Initiation</p>	<p>Long Range Land Use map change of ±25.06 acres from designated REC, Regional Employment Center with small portions of the Property also designated as FEC, Flexible Use Employment Center and ER, Environmental Resource to HDN, High Density Neighborhood with a T-4 Transect to allow for residential housing to include single-family attached and/or multi-family stacked (e.g., stacked townhomes or two-over- two units), which provides additional housing in this area of the County and will help the County improve its housing stock for the 'missing middle.</p>	<p>MU T-4 and RN T-3.</p> <p>This application is consistent with all parcels except GPIN: 7892-53-8485, which is RN T-3 due to mostly being ER, Environmental Resource. Applicant requested that this parcel be designated MU T-4.</p>

Summary of Annual CPA Requests (not Initiated)				
CPA	Magisterial District	Agent / Applicant	Proposal	Proposed Land Use/ Consistent
<p>Dumfries Road Senior Residential</p> <p>CPA2022-00005</p> <p>GPIN 7892-53-8485</p>	Coles	<p>Jonelle Cameron Jessica Pfeiffer Walsh, Colucci, Lubeley & Walsh</p> <p>Franklin Johnston Group Management & Development, LLC</p> <p>Concurrent REZ will be filed upon CPA Initiation</p>	<p>Long-Range Land Use map change of ±9.24 acres from NC, Neighborhood Commercial, and SRR, Semi-Rural Residential to SRH, Suburban Residential High, SN, Suburban Residential, or NMU, Neighborhood Mixed Use, (without a requirement to provide a non-residential component on-site) all with a T-4 Transect. The Applicant will rezone the Property to the PMR, Planned Mixed Residential District, to allow for a senior residential to include multi-family units.</p>	<p>MU T-4 and MU T-3 area with frontage to Rt. 234 for consistency with the remaining quadrants of the intersection with Hoadly Road and Rt. 234.</p> <p>This application is partially consistent with the exception of the T-3 area that has frontage along Rt. 234.</p>

Summary of Annual CPA Requests (not Initiated)				
CPA	Magisterial District	Agent / Applicant	Proposal	Proposed Land Use/ Consistent
15015 Lee Highway CPA2022-00014 GPINs: 7297-90-0961 7297-81-2619 7297-80-3751	Brentsville	Olaun Simmons and Mike Vanderpool Cushing Road, LLC 14917-A and 14917-P Lee Highway LLC Concurrent REZ will be filed upon CPA Initiation	Long-Range Land Use map change of ±27.10 acres from CEC (Community Employment Center) and SRL (Suburban Residential Low) to SRM (Suburban Residential Medium), which allows residential development at a density up to 6 dwelling units/acre. This designation will improve housing affordability as it will create the opportunity to provide a greater variety of housing types in an area of the county where residential development is heavily weighted towards single family detached homes. The applicant is seeking Transect Zone T-3, which has a target residential density of 4-14 dwelling units/acre.	RN T-2 This application is not consistent with the proposed Land Use Map and would require the CPA to be initiated by the Board of County Supervisors.

The CPA initiation applications that are not consistent with draft Land Use Map are included as an attachment, "Table of Requests Inconsistent with the Land Use Map", for the Planning Commission consideration.

- M. Additional Requests for Land Use changes - Throughout the community input process, the Planning Office received feedback on the Land Use Map. After the due date to submit Long Range Land Use change request applications, additional requests came in for consideration to change land use classifications for parcels

throughout the County. Those requests that are not consistent with draft Land Use Map are included as an attachment, “Table of Requests Inconsistent with the Land Use Map”, for the Planning Commission consideration. Altogether, there were 10 requests in the Brentsville District, 5 in the Coles District, 6 in the Gainesville District, 1 in Neabsco District, 3 in the Potomac District, 3 in the Occoquan District and 1 in the Woodbridge District.

STAFF RECOMMENDATION

The Planning Office recommends that the Planning Commission recommend adoption of the following updates into the Comprehensive Plan:

- Comprehensive Plan Amendment #CPA2018-00007, Land Use Chapter,
- Comprehensive Plan Amendment #CPA2018-00006, Mobility Chapter,
- Comprehensive Plan Amendment #CPA2022-00001, Housing Chapter,
- Comprehensive Plan Amendment #CPA2022-00002, Sanitary Sewer Chapter,
- Comprehensive Plan Amendment #CPA2023-00001, Electrical Utility Services Plan

The proposed amendments are supported by staff for the following reasons:

Each of the Comprehensive Plan chapters provides guidance through policies and action strategies for the future development of Prince William County based on updated demographic projections extending to 2040:

- The Comprehensive Plan chapters create a holistic vision for the County by aligning several Chapters of the Comprehensive Plan with the County’s 2021-2024 Strategic Plan.
- The Land Use Chapter provides detailed guidance through policies and action strategies for the development of the County while incorporating new concepts that address Equity, Environmental Justice and Sustainability.
- The Housing Chapter provides guidance on meeting the concerns of affordability and housing needs of the County.
- The Mobility Chapter capitalizes on an opportunity to improve transportation networks and ensure a robust and connected system of roads, transit, pedestrian, bicycle, greenways, trails, open space, and parks which provide a benefit to the environment, County residents, and local wildlife.
- The Sanitary Sewer Chapter provides guidance on future sewer infrastructure needed to serve the existing and proposed development as outlined in the Land Use chapter.

- The Electrical Utility Service Plan includes new policies and action strategies to provide guidance on siting and design issues for electrical system supportive facilities within the County.
- The Plan incorporates the extensive feedback from the community from the public participation process and supports and furthers the County Smart Growth Principles in accordance with the Comprehensive Plan.

Community Input

The Land Use, Housing, Mobility, Sanitary Sewer, and Electrical Utility Services Plan included research, stakeholder, and community engagement, leading to the final updates for each chapter. Each of these chapters and the meetings associated with the updates were made available on the project page web-portal: www.pwcva.org/pathwayto2040. The Pathway-to-2040 web page also included comment forms and informational videos that explained each of the Chapter updates. In addition, the Planning Office placed draft documents in the County Public Library System to give opportunities to review the documents.

Below is a list of public information meetings, focus group sessions, committee and commissions input presentations, Planning Commission and Board of County Supervisors work sessions, These events occurred through a variety of methods such as in-person, virtual and hybrid meetings.

3/23/2021- 3/25/2021: Held three Introductory virtual Community Meetings on the Land Use and Housing Comp Plan Update: Eastern PWC on March 23 with 164 registrations, Central PWC on March 24 with 141 registrations, Western PWC on March 25 with 245 registrations.

4/20/2021: Held a focus group meeting on Economic Development

4/21/2021: Held a focus group meeting on Housing

4/23/2021: Held a focus group meeting on Building and Development

5/6/2021: Held a focus group meeting on Environment and Sustainability

5/26/2021: Held a virtual meeting on Mobility Plan Update. This meeting covered the Roadway and Transit elements of the Plan.

6/9/2021: Held a virtual meeting on Mobility Plan Update. This meeting covered the Roadway and Transit elements of the Plan.

6/15/2021: Held a focus group meeting on Trails and Blueways.

7/7/2021: Held a Planning Commission Work Session on the Land Use and Housing Chapters.

7/12/2021: Racial & Social Justice Commission Government and Workforce Committee Presentation

7/27/2021: Commission on Aging Presentation

8/26/2021: Housing Board Presentation

10/20/2021: Held a Planning Commission Work Session on the Land Use and Housing Chapters.

12/22/2021: Informational videos for Comprehensive Plan Update, Land Use, Housing, Mobility posted online.

1/26/2022: Held a Planning Commission Work Session on the Land Use and Housing Chapters.

2/2/2022: Held a Planning Commission Work Session on the Land Use Chapter.

2/9/2022: Held a Planning Commission Work Session on Housing.

2/10/2022: Held a Hybrid Public Meeting (in-person and online) at Beacon Hall, George Mason University, innovation Campus. Consisted of Public listening session and information stations. The event was streamed live on Granicus and recorded. The recorded video played on PWC TV channel.

2/16/2022: Held a Planning Commission Work Session on Housing and Land Use.

2/23/2022: Held a Planning Commission Work Session on Mobility.

3/23/2022: Held a Planning Commission Work Session on Demographics.

4/6/2022: Held a Planning Commission Work Session on Government Activity Center and Mobility.

4/12/2022: Presented the Land Use Chapter to the Historical Commission.

5/10/2022: Held a Board of County Supervisors Work Session on Land Use

5/11/2022: Held a Planning Commission Work Session on the Sanitary Sewer Chapter

7/12/2022: Held a Board of County Supervisors Work Session on Land Use

7/27/2022: Held a Planning Commission Work Session

Notice of the Comprehensive Plan Amendments associated with the Land Use, Housing, Mobility, Sanitary Sewer Chapters and the Electrical Utility Services Plan have been advertised and proposed amendments have been published on the Prince William County government web site and have been available in the Planning Office. PWC Alerts were sent to all who subscribe to PWC Alerts.

These documents associated with the Comprehensive Plan updates can be found at the following link: www.pwcva.org/pathwayto2040

Inputs on the proposed land use designation for specific properties have been received through Comprehensive Plan Amendment applications, Long-Range Land Use Change Request forms, emails and individual meetings throughout the process. Staff did not concur with a number of these requests, and these may be found in the attached Table of Requests Inconsistent with the Land Use Map.

Adjacent Jurisdiction Notice

Adjacent jurisdictions notices were sent. Their comments were considered in development of the updates to the Comprehensive Plan Chapters

Legal Issues

Under Section 15.2-2229 of the Code of Virginia, the Board of County Supervisors may consider amendments to the adopted Comprehensive Plan.

Timing

Under Virginia Code § 15.2-2229 “[i]f the governing body desires an amendment, it may prepare such amendment and refer it to the local planning commission for public hearing or direct the local planning commission to prepare an amendment and submit it to public hearing within 60 days or such longer timeframe as may be specified after written request by the governing body.” A public hearing before the Planning Commission was advertised for September 28, 2022. At this time the Board of County Supervisors has not required a timeframe for the Planning Commission

BOCS Initiating Resolution No. 16-647

MOTION: NOHE

**August 3, 2016
Regular Meeting
Res. No. 16-647**

SECOND: PRINCIPI

**RE: ACCEPT THE PROPOSED SCOPE OF WORK FOR THE
COMPREHENSIVE PLAN UPDATE**

ACTION: APPROVED

WHEREAS, under Section 15.2-2229 of the Virginia Code, the Board of County Supervisors may consider amendments to the Comprehensive Plan; and

WHEREAS, due to the availability of updated demographic projections extending to 2040, policies adopted and amended by the Prince William Board of County Supervisors, Board directives, changes in State law and completion of numerous public infrastructure projects, there is a need to update the Comprehensive Plan; and

WHEREAS, the Prince William Board of County Supervisors has initiated a number of Comprehensive Plan amendments including:

- Thoroughfare Plan Update
- Technical Review to Update Population and Employment Forecasts
- Economic Development Plan Update
- Urban Development Areas
- Levels of Service Standards; and

WHEREAS, the Prince William Board of County Supervisors has authorized various planning studies to provide analysis and recommendations regarding planning and land use issues including:

- COG Regional Activity Centers Study
- Potomac Communities Design Guidelines
- MCB Quantico Joint Land Use Study
- Rural Preservation Study
- Cockpit Point Battlefield Study
- Dale City Design Guidelines
- VRE Studies
- Bristoe Station and the Kettle Run Battlefields Preservation Study; and

WHEREAS, the Planning Office has recommended that the following areas be re-planned or have their existing plans revisited:

- North Woodbridge
- Parkway Employment Center
- Innovation
- Fairgrounds/New Dominion Area
- Independent Hill
- Triangle
- Yorkshire; and

BOCS Initiating Resolution No. 16-647

August 3, 2016
Regular Meeting
Res. No. 16-647
Page Two

WHEREAS, the proposed scope of work to update the Comprehensive Plan includes the above referenced comprehensive plan amendments, planning studies and areas recommended for additional planning;

NOW, THEREFORE, BE IT RESOLVED that the Prince William Board of County Supervisors does hereby accept the proposed scope of work for the Comprehensive Plan update.

BOCS Initiating Resolution No. 21-422

MOTION: FRANKLIN July 13, 2021

MOTION: ANGRY July 13, 2021
Regular Meeting

SECOND: BAILEY Res. No. 21-422

RE: INITIATE THE SEWER CHAPTER UPDATE OF THE COMPREHENSIVE PLAN –
COUNTYWIDE

ACTION: APPROVED

WHEREAS, under Section 15.2-2229 of the Virginia Code, the Prince William Board of County Supervisors (Board) may consider amendments to the Comprehensive Plan; and

WHEREAS, Section 15.2-2230 of the Virginia Code requires a review of the Comprehensive Plan every five (5) years to determine whether it needs to be amended; and

WHEREAS, due to the availability of updated demographic projections extending to 2040, policies adopted by the Board, changes in State law, and completion of numerous public infrastructure projects, there is a need to update the Comprehensive Plan; and

WHEREAS, the last Sanitary Sewer Plan update of the Comprehensive Plan was completed on October 17, 2017; and

WHEREAS, County staff recommends approval of this resolution; and

WHEREAS, the Board finds that this amendment guides and accomplishes a coordinated, adjusted, and harmonious development of the territory which will, in accordance with present and probable future needs and resources, best promote the health, safety, morals, order, convenience, prosperity, and general welfare of the inhabitants, including the elderly and persons with disabilities;

NOW, THEREFORE, BE IT RESOLVED that the Prince William Board of County Supervisors hereby initiates an amendment to the Comprehensive Plan for a Sewer Chapter Update.

INTRODUCTION

INTENT

The intent of this Mobility Plan is to provide an accessible, safe, comprehensive, multimodal transportation network that allows for the safe and efficient movement of goods and people throughout the County and into surrounding jurisdictions. The system includes networks of facilities and infrastructure, including roadways, transit stops and stations, elements supporting active transportation within the roadway right-of-way like pedestrian and bike facilities, and trails separate from the roadway network. It also includes services, including transit operations, taxi, and other ride-hailing models, and potentially bikeshare and other emerging modes including rentable e-scooters.

An integrated transportation system that provides mobility for all underpins the County's vision as "a diverse community striving to be healthy, safe, and caring with a thriving economy and a protected natural environment." It strives to ensure the efficient movement of people and goods, enhance quality of life, and provide for economic growth. As population and commercial growth continue to increase in the County and the region, the existing mobility network will have to change and adapt to accommodate the travel demands and preferences placed upon it. As such, it becomes essential for the County to diversify the way residential, recreational, commercial, and work-related trips move throughout the County. Specific objectives include adapting to changing mobility trends, improving multi-modal options, increasing the use of public transit, increasing travel time reliability while concurrently striving to decrease the use of vehicle fuels that contribute to climate change. All elements are proposed to be built and maintained in a safe and sustainable manner.

To manage congestion and provide equitable transportation solutions, Prince William must invest in all elements of the multimodal system described above. By developing transit-oriented communities ("TOD") which integrate transportation planning with land use planning and utilizing the ten principles of Smart Growth, as stated in the Land Use chapter, the County can reduce the future demand for transportation roadway infrastructure. Concentrating population, jobs, and infrastructure within vibrant, walkable communities throughout Prince William County will help to ease existing road congestion and manage future demand by providing options for multimodal travel and reduce dependency on automobiles. Ensuring that the mobility network includes connections to, and expansion of, the County's recreational trail network also promotes healthier communities, cross-county connectivity, commuter transportation options and the potential for economic growth through tourism.

The Mobility Chapter provides a framework for meeting the existing and future needs of Prince William County, through policies and action strategies directed at a safe, equitable, and connected mobility network. Additionally, it serves as a guide to the County's Departments of Transportation

("DOT") and Parks, Recreation and Tourism ("DPRT"), the Virginia Department of Transportation "VDOT", the Potomac and Rappahannock Transportation Commission ("PRTC") also known as OmniRide, the Virginia Railway Express ("VRE"), residential/commercial developers, and other transportation-oriented entities in the region in their efforts to provide transportation improvements in accordance with the needs of the County. The specific road, transit, and trail projects proposed in this plan are high priorities for improving safety, equity, and connectivity across the County's mobility network and are therefore expected to be a key focus of capital improvement budgets for the duration of this plan. In addition to major airports in the region, the Manassas Regional Airport, which is the largest general airport in Virginia is located in the City of Manassas and surrounded by Prince William County. This airport serves as a "gateway" for businesses coming to and from Prince William County, serving as an essential mode to further economic progress in the County and region.

To better support the County's intent to provide residents and visitors a truly multimodal transportation network, the recreational trail component of the Comprehensive Plan has been incorporated into this Mobility Chapter.

POLICIES AND ACTION STRATEGIES

Mobility Chapter Policy Focus Areas

The proposed Mobility Chapter will focus on the following areas:

1. General Transportation/Mobility (G)
2. Roadway (RP)
3. Transit (TR)
4. Active Mobility/Transportation (AT)
5. Recreational Trails (RT)

As part of the Mobility Chapter update, all policies will be titled “Mobility Policies” and the various Mobility action strategies related to the above areas will fall under one or more of the Mobility Policies.

MOBILITY POLICY 1: Ensure that the county’s transportation network prioritizes safety for all mode users, including motorists, transit riders, pedestrians, and bicyclists.

Action Strategies:

- G1.1** Utilize improved infrastructure design, enhanced enforcement, and public education to provide increased safety for all transportation modes.
- G1.2** Require safety to be a top priority in the planning, design, and construction of all mobility projects to improve safety for all transportation users.
- G1.3** Ensure that travelers are informed of all construction projects, utilizing various communication channels, including the County’s website, social media, and changeable message signs, and ensure that safe access and mobility is maintained throughout the construction of projects.
- G1.4** To ensure safe routes to schools, staff from DOT and other County departments/agencies will meet on a regular basis with the Schools’ Safe Routes to Schools coordinator or other representatives from Prince William Public Schools to document needs, identify priorities, develop project proposals, and pursue potential funding sources.
- G1.5** Require new residential development within 1 mile of existing or proposed school sites to consider safe routes to school connectivity or walkshed studies in development applications.
- G1.6** Prioritize in capital improvement project decisions, sidewalk gaps in existing neighborhoods that are within 1 mile of existing or proposed school sites.
- G1.7** Identify programs or initiatives to reduce roadway and pedestrian related

fatalities and injuries in the County.

- G1.8** Review vehicular crash data in response to requests from County Police, residents, and elected officials to determine the most effective solution to the issue, whether it be intersection improvements, signing, striping, and/or roadway improvements.
- G1.9** Utilize technology, such as solar powered Speed Monitoring Signs and Pedestrian Hybrid Beacons (“PHB”) if warranted by VDOT to improve safety.
- G1.10** Implement Crime Prevention Through Environmental Design (“CPTED”) strategies in new and redeveloped transportation projects to improve safety, such as enhanced lighting and unobstructed sidewalks.
- G1.11** Prioritize and identify roadway sections that could be realigned to improve overall roadway safety and operations.
- G1.12** Prioritize and identify intersections that could benefit from operational improvements and identify funding to support recommended improvements.
- G1.13** Study and evaluate roadway corridors for safety improvements to include “Road Diets” and “Roundabouts”.
- RP1.1** Develop a program with County Police to implement red light cameras to reduce/enforce speeding and implement cameras on school buses to reduce illegal passing of stopped buses.
- RP1.2** Consider developing an annual operating budget in the Capital Improvement Program for the improvement of County-maintained roads to meet Secondary Street Acceptance Regulations (SSAR) for adoption of roadways in VDOT’s Secondary Street System for maintenance (https://www.virginiadot.org/info/secondary_street_acceptance_requirements.asp).
- RP1.3** Review the County’s roadway network and roadway standards to adequately address the needs of emergency responders – including fire, Police, and EMS.
- RP1.4** Identify neighborhoods where high traffic volumes create safety concerns due to excessive speeds. Identify appropriate traffic calming measures outlined in the *PWC Residential Traffic Management Guide*. Where vehicle volume and speed are a result of cut-through traffic, identify methods for potentially shifting vehicles to roads designed to handle the traffic.
- RP1.5** Work with VDOT to implement safety strategies identified in the State Strategic Highway Safety Plan to reduce crashes resulting in severe injuries or deaths, consistent with the national highway strategy Towards Zero Deaths (<https://www.virginiadot.org/info/hwysafetyplan.asp>).

- TR1.1** Coordinate with transit agencies to help ensure safe access to transit facilities in the County through improved infrastructure design, transit stop locations, public education, and enhanced enforcement.
- AT1.1** Consider alternative bike facility improvements (such as paved shoulders) in areas where roadways are not planned to have shared use paths.
- AT1.2** Update and enhance the bicycle and pedestrian standards in Section 600 of the County's Design and Construction Standards Manual ("DCSM").
- AT1.3** Improve connectivity of sidewalks and trails to ensure continuous, safe access.
- AT1.5** Consider reducing the width of roadway travel lanes in Small Area Plans/Town Centers/Activity Centers to provide separated bike lanes/transit lanes and/or parallel parking to reduce speeds and incentivize safe multimodal options.
- AT1.6** Identify roadways and develop criteria for establishing safe on-road bicycle routes throughout the County, ensuring that these routes provide access within and between Activity Centers and transit nodes.
- AT1.7** All proposed improvements which impact public and private roadway areas should consider bicycle accommodations.
- RT1.1** Improve safety and visitor experience along recreational trails through appropriate and consistent trail route and distance markings, and the use of technology, such as Quick Response ("QR") codes, to provide trail maps, contact information, and user guides.

MOBILITY POLICY 2: Prioritize equity and access when planning for mobility projects

Action Strategies:

- G2.1** Ensure the quality and function of the transportation system contributes to equitable outcomes for all people by increasing mobility options and access for Equity Emphasis Areas as defined by the Metropolitan Washington Council of Governments ("COG") (<https://www.mwcog.org/transportation/planning-areas/fairness-and-accessibility/environmental-justice/equity-emphasis-areas/>), increasing accessibility for senior citizens, persons with disabilities, and those with transportation insecurities, and including equity as a planning principle in all mobility projects.
- G2.2** Use equity as a planning tool to identify social and racial disparities to mitigate adverse impacts consistent with Board Resolution 20-494. (<https://eservice.pwcgov.org/documents/bocs/briefs/2020/0616/res20-494.pdf>).
- G2.3** Consider the connection between neighborhoods and retail and institutional

services, transit nodes, and trails when designing roadways, and consider road width, speed limit, medians for protection, pedestrian signals, and facilities in the design of the roadway to allow disadvantaged populations to safely access services.

- G2.4** Remove physical barriers that restrict mobility access by discouraging dead end streets and cul-de-sacs and encourage designs that improve walkability, including inter-and intra-residential development pedestrian paths, on-street parking and locating parking lots behind buildings.
- G2.5** Identify neighborhoods in need of new or repaired sidewalks, curbs, gutters, ADA ramps, and street pavement or other infrastructure and supporting facilities and services and consider initiating and maintaining a repair and replacement program for these areas through appropriate private or public means. This includes recognizing future infrastructure enhancements to ensure that they will support transit improvements that incorporate ADA landing pads or widening sidewalks to accommodate bus shelters.
- G2.6** Develop a plan to improve communications accessibility by identifying alternative messaging and platforms for non-English speaking, digital illiterate, deaf, and blind persons.
- G2.7** Provide information codes, such as Uniform Resource Locator (“URL”) codes, at bus stops, wayfinding signs, and recreational and active mobility trails that can be translated into any language with a smart phone.
- G2.8** Incorporate universal signage design guidelines consistent with federal and state signage standards.
- G2.9** Seek to minimize displacement and environmental impacts to communities when planning for mobility projects.
- G2.10** Reduce commuting costs for residents, particularly residents at the poverty level and living in Equity Emphasis Areas (“EEA”), as measured by the U.S. Census American Housing Survey commuting model by improving access to affordable public transit.
(<https://www.census.gov/topics/employment/commuting/guidance/commuting.html>).
- TR2.1** Accommodate transit users with special needs, including the elderly, riders with young children and the people with disabilities, to ensure the mobility needs of all are met, including ADA requirements.
- TR2.2** Coordinate with the County Agency on Aging and Social Services to determine where transit services are needed and partner with these agencies and transit service providers to disseminate information and outreach to the elderly and

those with limited access to such resources

- TR2.3** Consider the location of mobility impaired populations and their travel needs (i.e., doctor, hospital, shopping, social activities, etc.) when determining the location of bus routes.
- TR2.4** Examine ways to provide transportation alternatives to those populations that don't have access to OmniRide or VRE. Such alternatives may be taxicabs or paratransit for the elderly, and/or the physically limited or disabled.
- AT2.1** Maintain a County online interface for gathering resident input on the location of active mobility gaps and improvements needed to connect residents to retail/commercial/activity/recreational areas.
- AT2.2** Where appropriate and consistent with applicable law, during rezoning and special use permit applications, encourage developers to consider providing private and/or public trails for inter-parcel connectivity and/or the recreational and wellness benefits, and/or land dedications/donations where needed to expand the County's greenway, blueway, and heritage corridors.
- RT2.1** Consider establishing a designated maintenance fund for recreational trails as part of DPRT's Capital Maintenance Program.
- RT2.2** Seek opportunities to create a variety of accessible recreational trail experiences (bicycle, equestrian, nature trails, etc.) for a diverse mix of populations (i.e., various age groups, level of mobility, etc.).

MOBILITY POLICY 3: Promote sustainability and resiliency when proposing new infrastructure or upgrading existing facilities that impact environmental and cultural resources.

Action Strategies:

- G3.1** Coordinate with the County's Public Works Department to encourage increased landscaping and plantings of native plants where applicable along road rights-of-way and in medians, as allowed by VDOT, to enhance the streetscape and environmental impacts of roadway improvements.
- G3.2** When planning and implementing transportation infrastructure, identify and seek to protect the existing environmental resources through approaches that avoid, minimize, and mitigate impacts when practicable
- G3.3** Use EPA's Environmental Justice Screening and Mapping Tool ("EJScreen") to help identify potential environmental justice impacts of projects (<https://www.epa.gov/ejscreen>).

- G3.4** Evaluate identified regional strategies for meeting regional greenhouse gas reduction goals for incorporation into County mobility projects (<https://www.mwcog.org/tpb-climate-change-mitigation-study-of-2021/>).
- G3.5** Prioritize improvements to vulnerable infrastructure, as identified by VTrans Vulnerability Assessment (<https://www.vtrans.org/long-term-planning/megatrend-climate>).
- G3.6** Develop policies to help identify, mitigate impacts, and/or interpret cultural resources that are within right-of-way and/or impacted by developer road projects.
- G3.7** Coordinate with a County Archeologist and the County Office of Historic Preservation on County funded mobility projects to identify cultural impact mitigation measures and opportunities to enhance cultural resources.
- G3.8** Coordinate with the National Park Service to preserve integrity and enhance visitor experience at the Manassas National Battlefield Park without compromising accesses that currently exist. Study an alternative for Route 29 that serves to maintain and improve existing local access via existing Route 29/Route 234 Business from residential and planned business areas north of I-66 in Prince William and Fairfax County to Manassas residents, businesses, and the higher education campuses south of the park along Route 234 Business. Close Route 29 and Route 234 to through traffic within the park, after an alternative is built. Re-evaluate this action strategy as the preferred park bypass is completed. This includes coordinated efforts with Fairfax County as part of its Comprehensive Plan Update.
- G3.9** Coordinate with the Prince William County Office of Sustainability on supporting the Community Energy and Sustainability Master Plan (CESMP) and ensure that Mobility projects support the County's Climate Mitigation and Resiliency goals.
- G3.10** Develop short term and long-term mobility policies to support the County's adopted regional climate mitigation and resiliency goals.
- G3.11** Coordinate with regional partners to identify programs and initiatives that support reduction of greenhouse gas emission goals in support of climate resiliency.
- RP3.1** Promote the utilization of vehicles that use alternative fuels and other measures, including electricity, to reduce air quality and noise impacts.
- RP3.2** Evaluate functional plans and designs for proposed roadway construction projects to identify cultural or environmental issues. Where there are conflicts, identify and consider alternative alignments and improvements.

- RP3.3** Support the *Journey Through Hallowed Ground* National Heritage Area initiative to designate specified sections of Route 29 and Route 15 within Prince William County as a National Scenic Byway and/or an All American Road. Employ context sensitive solutions for highway projects within these sections.
- RP3.4** Support VDOT's Rural Rustic Road program to identify roads that qualify for this designation
(https://www.virginiadot.org/business/resources/local_assistance/Rural_Rustic_Road_Program_Manual_2014_Update_-_Recodification.pdf).
- RP3.5** Support VDOT's Scenic Byways program to identify roads having relatively high aesthetic or cultural value, leading to or within areas of historical, natural or recreational significance (<https://www.virginiadot.org/programs/program-byways.asp>).
- RP3.6** Consider the impact of traffic noise on neighborhoods and as part of County projects, implement appropriate noise mitigation measures in accordance with FHWA's noise abatement regulations (23 CFR 772)
(<https://www.fhwa.dot.gov/legsregs/directives/fapg/cfr0772.htm>).
- RP3.6** Consider alternative roadway designs during the planning stage that provide environmental benefits through improved operations, such as roundabouts.
- RT3.1** DPRT should coordinate with the County's Environmental Services/Watershed Division to establish guidelines and policies for the development of recreational trails within environmentally sensitive habitats and incorporate any design strategies, as appropriate, into related DPRT planning and design documents, such as the DPRT Trail Standards Manual.

MOBILITY POLICY 4: Maximize cost effectiveness of all multimodal projects through strategic project planning, programming, procurement, and delivery.

Action Strategies:

- G4.1** Work with federal, state, regional, County departments and public agencies, and private sector sources, to identify, plan, fund, and implement County mobility improvements utilizing outside sources of funding.
- G4.2** Collaborate with other agencies and jurisdictions to implement innovative and cost-effective projects.
- G4.3** Annually update the Six-Year Highway Primary and Interstate Road Improvement Plan and biannually update the Six-Year Secondary Road Improvement Plan for road construction and seek state and regional funding to implement these plans.

- G4.4** Research the use of alternative financing methods, such as mobility bonds and Transportation Improvement Districts, using the County’s Capital Improvement Program (“CIP”) as a foundation for the timing, location, and construction of roadway and recreational trails/activity mobility facilities.
- G4.5** Pursue methods for obtaining private sector resources to assist in the costs of design and/or construction of projects in the CIP, including identifying mitigation measures for offsetting impacts of land development when appropriate and consistent with applicable law
- G4.6** Monitor and inform local, regional and state long-range plans, policies, and projects through staff participation in committees and working groups to ensure alignment and collaboration with County plans and projects.
- G4.7** Identify and apply to federal, regional, and state grant programs to maximize external funding of County mobility projects.
- G4.8** Strategically program funds based on funding source requirements and project scope, cost, and schedule to maximize project cost efficiencies and delivery timeline.

MOBILITY POLICY 5: Enhance and expand the transit network and supporting infrastructure.

Action Strategies:

- RP5.1** Prioritize and implement infrastructure projects that improve access to transit.
- RP5.2** Develop a parking district policy for Activity Centers near existing or planned transit facilities that recognizes and balances the need for short-term and long-term parking supply.
- TR5.1** Identify and develop alternative transit concepts, such as bus rapid transit (“BRT”), light rail transit (LRT), Potomac ferry service, Metro rail extensions, and VRE expansion.
- TR5.2** Consider initiating feasibility studies of alternative transit concepts that would identify conceptual alignment and engineering; proposed station locations; transit vehicle technology and suitability; initial scan of environmental issues; fatal flaw analysis; and possible funding sources.
- TR5.3** Aggressively seek funding through grants to develop alternative transit concepts.
- TR5.4** Coordinate with regional, state, and federal agencies to facilitate the design and construction of alternative transit concepts.
- TR5.5** Improve intra-County bus network connecting Activity Centers.

- TR5.6** Support public information campaigns to increase awareness of all available transportation options.
- TR5.7** Integrate multiple modes of transit in centralized locations to create multimodal hubs that will improve mode choice and connectivity of modal systems.
- TR5.8** Coordinate with adjacent jurisdictions, federal, state, transit and regional agencies such as but not limited to, OmniRide, VRE, and DRPT, to ensure that the county's transit system is compatible and connected to existing transit infrastructure in the surrounding metropolitan region.
- TR5.9** Encourage development or redevelopment along transit corridors, and within a ½-mile of existing or proposed transit facilities (i.e., bus stops, bus shelters, train stations, park-and-ride lots), expanding the transit infrastructure, through projects such as station and parking capacity expansions and additional or improved passenger facilities.
- TR5.10** Analyze feasibility of dedicated transit lanes and transit priority treatments to improve transit travel times and reliability.
- TR5.11** Support County and regional commuter programs, including vanpooling, ride hailing, ridesharing, and "slugging", through funding, coordination and promotion.
- TR5.12** Encourage the utilization of public/private partnership bus shuttle programs to connect developments to mobility hubs.

MOBILITY POLICY 6: adapt to changing and emerging mobility trends.

Action Strategies:

- G6.1** Monitor and plan for emerging mobility trends, including changes in travel behaviors (i.e. decreased vehicle ownership, shift in peak demand, greater demand for walking and biking), and changes in mobility modes and technology (i.e. autonomous vehicles, electric vehicles, ridesharing, shared mobility devices, automated traffic enforcement) through the development of policies and strategies that will address changing mobility needs and support the shared use mobility network.
- G6.2** Monitor changes in travel behaviors to anticipate changes to levels of service and future demand and inform long-range planning for capital projects.
- G6.3** Support County and regional telework policies to reduce trip demand.
- G6.4** Identify opportunities for implementation of electric vehicle charging stations, or other fueling stations and determine appropriate infrastructure needs for low or

zero emissions vehicles, based on current and future technology. Encourage applications to consider electric vehicle charging stations during the rezoning and special use permit applications.

- G6.5** During the rezoning and special use permit applications, encourage applications to consider alternative modes for internal circulation and connectivity to existing transportation networks, such as shared mobility devices, electric scooters and bikes, and micro transit, which provides flexible, demand responsive transit services within a defined geographical area.
- G6.6** Encourage the incorporation of technology in mobility projects, including solar power and intelligent transportation systems.
- G6.7** Consider regional principles for Connected and Autonomous Vehicles (“CAV”), and alignment with VDOT’s CAV Program and Investment Roadmap (https://www.virginiadot.org/programs/connected_and_automated_vehicles.asp) in roadway projects (<https://visualize2045.org/future-factor/emerging-technologies/>).
- G6.8** Work with VDOT to support the Virginia Electrical Vehicle Infrastructure Deployment Plan and state policies for transitioning to a smarter, cleaner electric grid.

MOBILITY POLICY 7: Align mobility priorities with land use to increase mobility options, minimize projected trip demand and improve quality of life for county residents.

Action Strategies:

- G7.1** Improve capacity, options, and use of the active mobility and non-motorized network and supporting facilities and enhance intermodal connectivity consistent with land use to minimize trip demand.
- G7.2** Shift the focus from planning around vehicle accessibility to supporting more options for public transportation, ride sharing/hailing, biking, and walkable streets.
- G7.3** Include all modes of transportation for review and consideration as part of the rezoning and special use permit development review process to help ensure a multimodal transportation assessment of land use.
- G7.4** Develop guidelines for multimodal transportation assessment of County projects, to include mode split assumptions between vehicle, transit, and active transportation of trip generation estimates, to provide consistent review of proposed County projects.
- G7.5** Coordinate with VDOT to develop values-aligned goals including safety,

multimodal access, sustainability, and resiliency in order to assess the impacts of proposed development such as rezonings or special use permits

- G7.6** Develop/redevelop guidelines for landscaping, signage, and architectural standards for County gateways and roadway corridors. Continue to create and update Highway Corridor Overlay Districts (“HCODs”) and provide well-landscaped and well-maintained County gateways and corridors, or similar regulations for major roadways identified in the Roadway Plan, in conjunction with the Community Design Plan.
- G7.7** Prioritize transportation infrastructure in areas identified by the Long-Range Land Use Plan Map as Activity Centers or areas identified for targeted industries.
- G7.8** Support and identify funding for mobility improvements identified in approved Small Area Plans.
- G7.9** Identify mobility improvements that support and improve access to the Manassas Regional Airport.
- RP7.1** Evaluate the level of service (“LOS”) of existing and proposed roadway corridors and intersections to achieve a minimum LOS appropriate for the roadway classification and surrounding land uses.
- RP7.2** Reduce expected traffic demand through use of Transportation Demand Management (TDM) strategies and use of Transit-Oriented Development (“TOD”) to create compact, mixed-use Activity Centers that encourage greater micro transit, transit, and active mobility trips and reduce vehicle trips. This includes continued coordination with transit partners (OmniRide, VRE, and DRPT).
- AT7.1** Expand the DCSM bicycle parking rate requirements for a wider variety of commercial, office and industrial uses.
- AT7.2** Encourage bike parking facilities for 5% of the student and/or employee population at County facilities, including schools, libraries and government buildings.
- AT7.3** Apply bike lane designs from the National Association of City Transportation Officials (“NACTO”) Urban Bikeway Design Guide and other relevant guiding documents to the County’s Small Area Plans and urban areas.
- AT7.4** Proposals for new mixed-use commercial, office, or residential development should consider incorporating sidewalks, shared use paths or recreational trails, to connect to existing and adjacent facilities of a similar design, particularly where needed to provide connectivity between land uses and improve mobility in the immediate vicinity of the development.
- TR7.1** Provide transit connections, such as circulator transit systems, within and

between Activity Centers and provide first/last mile connections to transit services and multimodal hubs.

MOBILITY POLICY 8: Meet demand through capacity enhancements and innovative operational improvements

Action Strategies:

- RP8.1** Improve roadway capacity by providing new roadway segments and widening existing segments (as detailed in the Roadway Plan and presented in the Roadway Plan Summary); and providing grade separated interchanges or innovative interchange/intersections.
- RP8.2** Manage growth in Total Daily Vehicle Hours of Delay through continuing investments in the multimodal transportation system.
- RP8.3** Participate in performance-based planning studies, including VDOT’s STARS and Pipeline Programs, to identify innovative operational alternatives.
- AT8.1** Encourage public and private employers to create programs for employees that reduce trip demand by encouraging use of transit services and active mobility/recreational trail routes to and from the workplace.
- AT8.2** Encourage public and private opportunities for alternative uses at Park-and-Ride lots.
- RT8.1** Utilize trail counters, user surveys, and/or new technologies to collect demographic data and use patterns of visitors to the County’s recreational trails and identify trail enhancements/programs that increase resident and visitor satisfaction.

MOBILITY POLICY 9: Continue to enhance and expand recreational trail opportunities throughout the county by providing a diverse mix of trail types and experiences to and within the county’s parks, and greenway and blueway corridors.

Action Strategies:

- RT9.1** When appropriate and consistent with applicable law, actively seek to acquire fee simple interest in property or public recreational trail easements through land dedications, purchases, grants, or donations that are suitable for expanding or creating new recreational trails/trail networks that support the regional recreational trail planning initiatives of DPRT, PWC Transportation, VDOT, Virginia Outdoors Plan, etc.

- RT9.2** Develop a County-wide Trails Master Plan that identifies trail and active mobility gaps and includes priorities for inclusion into capital improvement and capital maintenance budgets. In support of action strategy REC 1.6 (Parks, Recreation and Tourism Chapter) include an evaluation of blueway opportunities, as well as an analysis of bicycle routes and equestrian trails. This plan should be updated every 10 years following the updates to the Parks, Recreation and Open Space Master Plan.
- RT9.3** In support of PK 1.6 and REC 1.3 (Parks, Recreation & Tourism Chapter), continue to develop and maintain a database of all County-maintained recreational trails and trail easements, to include primary trail use/type, surface, and other pertinent qualifying details.
- RT9.4** During the park master planning process, consider providing/expanding/improving recreational trail/active mobility opportunities to and within the County's parks, including expansion of the greenway and blueway trail networks. This should include identifying means to create appropriate bike/pedestrian access to all park entrances and/or trails from adjacent neighborhoods and establishing/completing accessible routes to and between park facilities.
- RT9.5** To address the fitness and health objectives identified in action strategy REC 1.8 (Parks, Recreation & Tourism Chapter), seek opportunities to establish accessible walking/fitness trails around the perimeter of the County's neighborhood and community parks.
- RT9.6** Seek opportunities to expand/create recreational trails that connect County parks. another.
- RT9.7** In support of Rec 1.4 (Parks, Recreation & Tourism Chapter), inventory all County parks lacking appropriate bicycle and pedestrian access at the park entrance and coordinate with DOT/VDOT to consider such improvements as adjacent roadways are developed/redeveloped, particularly at the neighborhood park level.
- RT9.8** Seek opportunities to expand equestrian and blueway trail opportunities, including the development of trailhead parking areas, as necessary to improve trail use/access.
- RT9.9** Provide recreational trail opportunities that serve the specialized needs of residents, with a focus on inclusion and accessibility for all types of recreational trails (i.e., nature, interpretive, equestrian, mountain biking, kayaking, etc.).

MOBILITY POLICY 10: Encourage resident, stakeholder, and inter-jurisdictional participation in the planning and design of the county's recreational trails, and greenway and blueway corridors, to promote a greater sense of community and to enhance regional connectivity.

Action Strategies:

- RT10.1** Continue to work with the Prince William County Trails & Blueways Council to collect input on recreational trail opportunities and priorities within each of the County's magisterial districts, and the County-wide trail network.
- RT10.2** Continue to seek input/assistance from the Prince William County Trails & Blueways Council, Greater Prince William Trails Coalition, Prince William Trails and Streams Coalition, residents, and other stakeholders, to identify recreational trail gaps and prospective routes for implementing the recreational trails, as well as the greenway and blueway components of this Chapter.
- RT10.3** Provide an interactive online map to collect resident/stakeholder input on trail gaps (recreational trails, shared use paths, sidewalks, etc.) and establish a database of project priorities.
- RT10.4** In support of PK 4.1 (Parks, Recreation & Tourism Chapter) seek opportunities to connect the County's recreational trails to similar trails provided by adjacent jurisdictions, and other local, regional, state, and federal park and trail providers.

MOBILITY POLICY 11: Balance recreational trail development and maintenance projects to ensure system-wide quality.

Action Strategies:

- RT11.1** Develop a database of recreational trail capital improvement and capital maintenance priorities for inclusion into County department budgets. Develop a recreational trail maintenance plan that identifies funding and staffing levels necessary to maintain the County's recreational trails.
- RT11.2** Actively pursue recreational trail grant funding that supports the County's recreational trail construction and maintenance efforts.
- RT11.3** Develop/formalize "Adopt A Trail", "Adopt A Stream", or similar program(s) to promote resident, stakeholder, businesses, and neighborhood investment in the maintenance and improvement of the County's recreational trails, and greenway and blueway corridors. Seek assistance from the Prince William County Trails & Blueways Council, or similar groups/organizations to lead these initiatives.
- RT11.4** Encourage residential rezoning applications to consider connecting community trails to the surrounding trail network and allow public access to these trails to

enhance overall connectivity. Priority should be given to help fill gaps in the existing trail network.

MOBILITY POLICY 12: Consider access, mobility and impacts on the transportation system within this region while protecting the county's rural areas.

Action Strategies:

- G12.1** Support the expansion of Broadband in the Rural Area to provide more teleworking opportunities for its residents, thus reducing the impacts on the roadway network.
- RP12.1** Develop roadway typical sections that support rural context to include shoulder and ditch sections, and preservation of rural aesthetics. Consider developing roadway shoulder standards that are wide enough to accommodate bicyclists.
- RP 12.2** Support Agritourism/Agribusinesses through design of gravel roads/parking lots that can accommodate the volume of vehicles generated by the businesses.
- RP12.3** Preserve the existing unpaved rural road network. Pave only when VDOT can no longer provide adequate maintenance to keep the facility in operable condition either due to the geometry or traffic demands of the road. Consider alternate paving surfaces such as tar and chip, pave in place and Rural Rustic Road standards.
- RP12.4** Request VDOT/CTB to designate rural roads as Virginia Scenic Byways to preserve the cultural and scenic qualities of these roads and to promote tourism in the Rural Area.
- RP12.5** Make essential safety improvements on unpaved roads based on volumes, type of traffic and crash data.
- RP12. 6** Consider features such as tree canopy, stone walls and fences, historic and agricultural structures and significant viewsheds when planning a new roadway.
- TR12.1** OmniRide doesn't currently provide service to the Rural Area due to low densities. However, future consideration may be given to routes that connect towns and villages within the Rural Area. Park and ride lots should be considered along primary routes to provide options to rural residents for transit service, carpooling or vanpooling.

ROADWAY PLAN

INTENT

The Roadway Plan provides a guide that will assist the County in its goal of providing the necessary roadway infrastructure to address existing and projected traffic demands in the County. As the County continues to grow, various roadway segments will be improved to maintain desired levels of service. These improvements can include proposing new roadways, widening of existing roadways, and intersection and interchange improvements which can improve the functional level of service and provide safe, efficient movement of traffic. In support of this goal the Roadway Plan identifies and highlights major roadways (interstates, parkways, arterials, and collectors) and provides guidance on the functional classification of existing and proposed roadways, the location of future intersections and interchanges, and anticipated lanes. Prioritization of these improvements will be determined by the Board of County Supervisors.

While there are still numerous segments of roadways that need to be constructed and extended, the total lane miles needed as part of the Roadway Plan is lowered compared to the previous plan. This shift is consistent with the Mobility Chapter's enhanced focus on achieving an interconnected multimodal system. While the total number of lane miles needed is decreased, new opportunities are planned to provide enhanced access to other modes of mobility including transit and active transportation, such as walking and biking. In addition, the County has adopted a number of Small Area Plans and continue to be established Activity Centers to focus new growth in areas with access to existing transit and create opportunities for more urbanized development. As a result, it is expected that the Level of Service (LOS) will be closer to LOS E and certain locations LOS F due to density and slower speed of traffic. Please see Appendix A for an overview of the LOS standards.

The Roadway Plan provides a map of the identified roadways in the County. Figure 1 provides general guidance on roadway standards for each type of roadway included in the Plan, and Figure 4 provides specific information about each roadway included in the Plan.

GENERAL ROADWAY STANDARDS

Functional Classification	Access		Lane Average	ROW Average	Maximum Design Speed	Transit and/or HOV Potential	Bike and Pedestrian Facilities
	Crossovers	Curb Cuts					
Interstates	Interchange 1 mile minimum in urban areas; 2 miles in rural areas	Prohibited	4 to 8 lanes May also include an additional 1 to 2 HOV lanes	Variable based on number of lanes and freeway/interstate type	70 mph	Potential for HOV lanes and/or transit corridor	N/A
Parkways (PA-1 / PA-2)	1100 feet 900 feet minimum	Prohibited	4 to 8 lanes	152 / 160 feet	60 mph	Potential for transit corridor	Shared Use Path
Principal Arterial (PA-1 / PA-2)	1100 feet 900 feet minimum	Heavily Discouraged	4 to 8 lanes	152 / 160 feet	60 mph	Potential for transit corridor	Shared Use Path
Minor Arterials (MA-1 / MA-2)	900 feet 700 feet minimum	Discouraged	4 to 6 lanes	128 / 106 feet	50 mph	Potential for transit corridors & bus turnoffs	Shared Use Path and Sidewalk
Collectors (MC-1 / MC-2)¹	800 feet 650 feet minimum	Allowed	4 lanes	104 / 106 feet	45 mph	Potential for transit corridor & bus turnoffs	Shared Use Path and Sidewalk

¹ Included in DCSM Update

Figure 1: General Roadway Guidelines and Standards

Functional Classification	Access	Lane Average	ROW Average	Maximum Design Speed	Transit and/or HOV potential	Bike and Pedestrian Facilities
	Crossover					
Through Boulevard (UTB-1)	800 feet 650 feet minimum	4 lanes	101 feet	45 mph	Potential for transit corridor and bus turnoffs	Shared Use Paths and Sidewalks
Boulevard (UB-1)	650 feet 200 feet Minimum	2 lanes	77 feet	30 mph	Potential for transit corridor and bus turnoffs	Bike Lanes, Shared Use Paths and Sidewalks
Avenue (UAS-1)	650 feet 200 feet Minimum	2 lanes	71 feet	25 mph	Potential for transit corridor	Shared Use Paths and Sidewalks
Street (UAS-1)	650 feet 200 feet Minimum	2 lanes	65 feet	25 mph	Potential for transit corridor	Shared Use Paths and Sidewalks
Private Side Street (UPS-1)	N/A	2 lanes	51 feet	20 mph	N/A	Sidewalks
Private Alley (UA-1)	N/A	2 lanes	20 feet	10 mph	N/A	N/A

Yates Ford Road	612	Davis Ford Road to Fairfax CL	Major Collector	existing		2

Figure 4: Roadway Plan Summary

ROADWAY DESCRIPTIONS

The following narratives discuss the roadways identified in Figure 4 above. The narratives provide general information about each of these roadways. The information provided below is current as of the date of adoption of the Comprehensive Plan. You should refer to the Prince William County Department of Transportation website (<https://www.pwcva.gov/departments/transportation>) for current information.

Interstates

I-66 (Fauquier County line to Fairfax County line) (275' minimum/variable) – Construction of a third general purpose lane, plus high occupancy vehicle/toll lane (HOT) lane/fourth general purpose lane has been completed between Fairfax County and the I-66/Rt 15 interchange. An extension of the third general purpose lane and shared HOV/fourth general purpose lane from the I-66/Route 29 interchange to the Fauquier County line is being proposed to assist in the inter-county movement of traffic to and from the western portion of Prince William County.

I-95 (Fairfax County to Stafford County) (450' minimum/variable) – First identified in the 1982 Comprehensive Plan, reversible HOV lanes have been completed from the Occoquan River to Quantico Creek, south of Route 234. The conversion of those reversible HOV lanes to high occupancy toll (HOT) lanes – as well as the addition of a third HOT lane and the extension of those lanes to Garrisonville Road in Stafford County was completed in 2014. The construction of a fourth general purpose lane has been recommended to assist in handling the increasing commuter traffic associated with adjacent jurisdictions to the north and south.

Parkways

James Madison Highway/Route 15 (Loudoun County to Lee Highway/Route 29) (160' PA-2 standard – 174' only in some locations. This roadway supports inter-county traffic to and from Loudoun and Fauquier Counties, as well as supports intra-county movement to and through the Gainesville area. It is the only existing major roadway connection between Prince William County and Loudoun County. Grade separation with the Norfolk-Southern rail line should be evaluated for feasibility and need. The recommended right-of-way for this roadway corresponds generally to the PA-2 standard – except in segments where the VDOT functional plan for this roadway recommends a higher right-of-way standard. Context sensitive solutions for improving this roadway should be evaluated and used where appropriate given that this roadway is within the Journey Through Hallowed Ground corridor.

Prince William Parkway (Liberia Avenue to Hoadly Road) (160' PA-2 standard) – This road serves cross-county trips and provides a connection from the eastern end of the County to the City of Manassas and to points north and west of Manassas (through additional sections of the Parkway).

Principal Arterials

Centreville Road/Route 28 (City of Manassas to Fairfax County) (128' MA-1 standard) – This road is a traditional commercial corridor linking the City of Manassas with Fairfax County (and I-66 further to the north). A standard principal arterial typical section is not recommended between Fairfax County and the City of Manassas because of the extent and nature of existing development. As such, a minor arterial standard is being proposed. Operational improvements should be evaluated for this corridor.

Dumfries Road/Route 234 (Brentsville Road to Richmond Highway/Route 1) (160' PA-2 standard) – This section of Route 234 carries heavy volumes of both inter and intra-county traffic. In conjunction with Route 234, this roadway connects the eastern end of the County to the western end of the County and provides access to both I-66 and I-95. The recommended right-of-way corresponds with the standard PA-2 section, as well as the VDOT engineering plans for this completed section of roadway.

Gordon Boulevard/Route 123 (Fairfax County to Express Drive/Belmont Bay Drive) (120' existing) – This road leading into Fairfax County will continue to carry increased vehicular traffic. It provides an important connection from Old Bridge Road and Route 1 to I-95 and is a route for eastern Prince William County residents to travel to the employment areas in central Fairfax County and the City of Fairfax. The recommended right-of-way corresponds with the standard typical section provided within the VDOT engineering plans for Route 123.

Potomac Shores Parkway (Richmond Highway/Route 1 to Cherry Hill Road) (160' existing) – This roadway will extend Dumfries Road (Route 234) east of Route 1 in order to provide access to Potomac Shores, including the Potomac Shores Virginia Railway Express (VRE) station. The proposed roadway will be a controlled access facility. The recommended right-of-way corresponds with the right-of-way approved with the Potomac Shores Potomac Shores rezoning.

Lee Highway/Route 29 (Fauquier County to James Madison Highway/Route 15) (156' PA-1 standard) – This portion of Route 29, located between Fauquier County and Pageland Lane, is designated as one of the National Highway System's high priority corridors for federal funding. The reconfiguration of the Route 29/I-66 interchange, grade separation of the Norfolk-Southern railroad as it crosses Route 29, and a grade-separated interchange at the Route 29/Rt 55/Linton Hall Road intersection were recently completed. Context sensitive solutions for improving this roadway should be evaluated and used within sections of this corridor designated as a Virginia Byway, National Scenic Byway, or All-American Road. The closure of Route 29 within the Manassas National Battlefield Park is being proposed after the construction of the Manassas Battlefield Bypass and/or Rt. 29 Alternate Road is completed.

Nokesville Road/Route 28 (Fauquier County to Vint Hill Road) (160' PA-2 standard); (Vint Hill Road to City of Manassas) (156' PA-1 standard) – This section of roadway provides a connection

between Fauquier County and areas within and adjacent to the City of Manassas including Innovation Park, the Manassas Regional Airport, the Broad Run VRE Station and many of the surrounding industrial areas.

Prince William Parkway/Route 234 (I-66 to Brentsville Road, excluding the City of Manassas) (160' PA-2 standard) – This section of Route 234 provides intra-county connections to employment areas such as Innovation Park, as well as connections to many of the industrial areas within the Brentsville district. When linked with the section of Dumfries Road this roadway provides a major connection between I-95 and I-66.

Prince William Parkway/Route 294 (Hoadly Road to Richmond Highway/Route 1) (156' PA-1 standard) – This road is designed to help facilitate the large volumes of traffic going to and coming from the I-95 corridor and provides access to the commercial areas within and surrounding Potomac Mills. Richmond Highway/Route 1 (Fairfax County to Stafford County – excluding the Town of Dumfries) (140' – 150'. Richmond Highway functions as a multi-modal principal arterial carrying both intra and inter-county traffic. As I-95 gets more congested, traffic volumes will continue to increase on Route 1 and there will be a need for grade-separated interchanges/innovative intersections at Route 234, Dale Boulevard, and Route 123. The 140' right-of-way is being proposed from Fairfax County to the Joplin/Fuller intersection (excluding the area associated with the Route 1/Route 123 interchange) and 150' right-of-way is being proposed for the section between the Joplin Road/Fuller Road intersection and Stafford County.

Sudley Road/Route 234 Business (I-66 to City of Manassas) (160' existing) – This road provides a primary commuter route for residents accessing I-66. Additionally, this road serves a large retail area of the County. Operational improvements should be analyzed for this corridor. Minor Arterials

Balls Ford Road (Wellington Road to Sudley Road/Route 234 Business) (128' MA-1 standard) – This road provides access to and from I-66 for the nearby existing and planned industrial uses. This road provides access to the new Park and Ride Lot on Century Park Drive that provides direct access to and from the High Occupancy Toll (HOT) lanes on I-66. The road has been relocated from Doane Road west to Devlin Road to accommodate an interchange with Route 234.

Belmont Bay Drive (Gordon Boulevard/Route 123 to Palisades Street) (128' MA-1 standard) – This road provides a connection between the Belmont Bay development (including the town center, marina, and other proposed uses within the development) and the Route 1 area, including the Woodbridge Virginia Railway Express (VRE) station. The recommended right-of-way corresponds with the MA-1 standard typical section. Belmont Bay may want to consider a reduction in travel lanes with a rezoning application that reduces the number of vehicles forecast for this road in order to include additional pedestrian/bicycle facilities.

Benita Fitzgerald Drive (Dale Boulevard to Cardinal Drive) (128' MA-1 standard, existing) – This road provides a north-south intra-county connection between Dale Boulevard and Cardinal Drive. The road distributes traffic generated in southeastern Dale City and the north sections of

Montclair onto Dale Boulevard where traffic can proceed to I-95. No additional right-of-way is needed for this roadway.

Bristow Road (Nokesville Road/Route 28 to Dumfries Road/Route 234) (existing) – Traffic volumes have increased along this intra-county connecting roadway. Although volumes are substantial, the historic and cultural impacts to the villages of Brentsville and Bristow that will result by widening the road are significant enough that the County proposes leaving the right-of-way and cross-section of this roadway as it currently exists, except for the section between Nokesville Road and the railroad tracks. Final decisions concerning the impacts of widening this section of roadway, as well as how and where to provide transitions to the existing two-lane sections of the roadway, should be based on future traffic projections as developments are proposed. Additionally, potential methods for bypassing both Bristoe and Brentsville should be analyzed to see if a solution to both the traffic and historic/cultural issues can be achieved.

Cardinal Drive (Minnieville Road to Richmond Highway/Route 1) (104' MC-1 standard – 128' MA-1 standard, existing) – This road provides a connection between Richmond Highway and Minnieville Road and allows access to both roads from the Montclair and Cardinal Drive residential areas.

Caton Hill Road (Minnieville Road to Prince William Parkway/Route 294) (120' existing) – The connection of this road from Minnieville Road to the Prince William Parkway provides improved access to the commercial centers along Minnieville Road and the Parkway, as well as improved access to the major commuter parking lots (Horner Road and Telegraph Commuter Lots) along I-95. The right-of-way corresponds with the existing right-of-way provided for this already constructed roadway.

Dale Boulevard (Hoadly Road to Benita Fitzgerald Drive) (110' - 160' existing); (Benita Fitzgerald Drive to Richmond Highway/Route 1) (180' existing) – This arterial traverses the heart of Dale City extending from Route 1 to Hoadly Road. Dale Boulevard provides residents of Dale City a direct route to I-95 and the road is a major intra-county connection. The recommended right of way corresponds with the existing right-of-way acquired for this road.

Devlin Road (Linton Hall Road to Wellington Road) (128' MA-1 standard) – This road connects Linton Hall Road to Wellington Road and beyond to Balls Ford Road through the new Balls Ford Road/Prince William Parkway interchange. The realignment of this road with Balls Ford Road also provides for an improved connection for these areas to Route 234 Bypass, Sudley Road, and I-66. **Dumfries Road/Route 234 Business (City of Manassas to Prince William Parkway/Route 234)** (128' MA-1 standard) – This road, located between Route 234 and the Manassas city limits, serves as the southern link of the business route into the City of Manassas. The Comprehensive Plan for the City of Manassas proposes widening the section of Dumfries Road leading into Prince William County to a four-lane section and as such, this proposed widening would match that project.

Fleetwood Drive (Fauquier County to Aden Road) (62' RM-1 standard) – This roadway provides a connection for residential travelers between eastern Fauquier/northern Stafford Counties and

Aden Road. Because of right-of-way constraints, Fleetwood Drive is planned to remain a two-lane road.

Gideon Drive (Dale Boulevard to Smoketown Road) (120' existing) – This road provides direct access to Potomac Mills and the Hylton Chapel. Additionally, this road allows for access to the PRTC Transit Center and provides access to I-95 through a connection with Dale Boulevard.

Heathcote Boulevard (James Madison Highway/Route 15 to Lee Highway/Route 29) (128' MA-1 standard) and Rt. 15 west to Antioch Road (77' RL-2 standard). – In order to provide additional east-west capacity in the western end of the County, Heathcote Boulevard parallels both I-66 and Route 55 (John Marshall Highway) and is designed to carry local residential traffic north of I-66 to the employment and commercial areas along Route 29 in Gainesville. Furthermore, the roadway provides an additional connection for the areas of the County to the north of Route 29 to and from I-66. The section from Rt. 15 west to Antioch is a 2-lane section within a reduced right of way to serve as emergency access to the hospital.

Hoadly Road (Dumfries Road/Route 234 to Prince William Parkway/Route 294) (110' existing) – Hoadly Road is a four-lane divided facility that allows for intra-county movement between Dumfries Road and the Prince William Parkway. The recommended right-of-way corresponds with the 110' that currently exists for this roadway.

John Marshall Highway/Route 55 (Thoroughfare Road to Lee Highway/Route 29 – excluding the Town of Haymarket) (128' MA-1 standard) – This road serves traffic generated in and attracted to the Gainesville/Town of Haymarket area. The recommended right-of-way for this road corresponds with the MA-1 standard typical section. Note that the section of Route 55 leading into the Town of Haymarket from the east and west must be transitioned to an MC-1 standard section (104') or smaller in order to provide a feasible connection to the town's two-lane section of Route 55 (Washington Street). Final engineering will be needed in order to determine the appropriate right-of-way transition lengths.

Linton Hall Road (Lee Highway/Route 29 to Nokesville Road/Route 28) (128' MA-1 standard) – Increasing traffic volumes on this intra-county route and development in the Gainesville area created the need for the widened sections of this roadway. Linton Hall Road provides an important connection between Lee Highway (Route 29) and Nokesville Road (Route 28).

Manassas Battlefield Bypass (Lee Highway/Route 29 to Fairfax County) (128' MA-1 modified) – This roadway is proposed to provide connectivity around the Manassas National Battlefield Park in an effort to accommodate traffic shifts created by the closure of Lee Highway and Sudley Road to through traffic within the Battlefield. In addition, Groveton Road/Featherbed Lane are also being proposed as closed to all through traffic. As such, this bypass provides an inter-county connection. The alignment of this roadway (between Sudley Road and Route 29) is an extension of Sudley Road. There is no need for both the Rt. 29 Alternate and the Manassas Battlefield Bypass. Both have been included in the Roadway Plan to provide alternatives for restricting through traffic through the Manassas Battlefield Park, a goal of the Park Service.

Minnieville Road (Dumfries Road/Route 234 to Old Bridge Road) (128' MA-1 standard) – Minnieville Road provides a connection for traffic in Dale City to reach the northeast areas of the County including the Lake Ridge and Occoquan areas surrounding Old Bridge Road. Additionally, Minnieville Road provides access to areas along Dumfries Road, such as parts of Quantico and the Prince William Forest Park. The recommended right-of-way corresponds with the MA-1 standard typical section.

Neabsco Mills Road (Opitz Boulevard to Richmond Highway/Route 1) (128' MA-1 standard) – This road handles local traffic generated by proposed employment centers along Route 1 and in nearby areas. This road, which parallels I-95 and Route 1, relieves these two roads of local traffic and provides improved emergency access to the Sentara Northern Virginia Medical Center. The recommended right-of-way corresponds with the MA-1 standard typical section.

Old Bridge Road (Prince William Parkway/Route 294 to Colby Drive) (Colby Drive to Gordon Boulevard/Route 123) (120') – This road provides a major intra-county connection and provides access to both I-95 and the Prince William Parkway. This road will continue to handle increased traffic volumes as development continues in the residential and commercial sections of Lake Ridge.

Opitz Boulevard (Gideon Drive to Richmond Highway/Route 1) (110' existing) – This road connects the Potomac Mills area to Route 1 and provides access to the Sentara Northern Virginia Medical Center. The recommended right-of-way generally corresponds with existing right-of-way acquired for this road, but in areas where less than 110 feet exist, additional right-of-way to reach 110 feet may be required.

Pageland Lane (Sudley Road/Route 234 to Groveton Road) (128' Modified M-1 standard) – Pageland Lane provides access to the Manassas National Battlefield Park via Groveton Road. Additionally, it provides an important connector between Rt. 29 and Sudley Road to serve the recommended land uses in the Pageland Corridor. This road should include shared use paths on both sides to provide connectivity to the Manassas National Battlefield Park. In addition, there should be a limited number of intersections with roundabouts instead of traffic signals to respect the integrity of the adjacent park.

Potomac Shores Parkway (Cherry Hill Road to River Heritage Boulevard / Marina Access Road) (121' existing) – This section of Potomac Shores Parkway connects the marina area of Cherry Hill to the Potomac Shores development. A reduced and modified minor arterial section was allowed with the Potomac Shores Town Center because traffic volumes did not generate the need for a principal arterial section. As such, the right-of-way for this section of roadway corresponds to the existing right-of-way provided with the Potomac Shores development.

Prince William Parkway/Route 294 (Dumfries Road/Route 234 to Liberia Avenue) (118' existing) – This roadway is an extension of Liberia Avenue that provides a connection between the Prince William Parkway (Route 294) section that traverses the eastern end of the County and the section of the Prince William Parkway (Route 234) that traverses the western end of the County.

Although most sections of the Parkway function as principal arterials, the characteristics of this section of roadway more closely represent a minor arterial.

River Heritage Boulevard (Richmond Highway/Route 1 to Potomac Shores Parkway/Patriot Circle) (121' existing) – This road on the Cherry Hill Peninsula provides access for the proposed Potomac Shores development from Route 1, including access to the proposed marina on the Potomac River. The recommended right-of-way corresponds with the approved right-of-way associated with the Potomac Shores development.

Rixlew Lane (Wellington Road to Sudley Road/Route 234 Business) – This road provides a connection between Wellington Road and Sudley Road (Route 234 Business) adjacent to the Manassas Mall. Because of right-of-way constraints, the recommended right-of-way corresponds to the existing right-of-way.

Rollins Ford Road (Vint Hill Road/Route 215 to University Boulevard) (128' MA-1 standard) – This road provides an alternative to Glenkirk Road and provides access to Vint Hill Road and Linton Hall Road for the residential developments in the area. A connection is proposed from Linton Hall Road to University Boulevard to provide an additional north-south connection access to the adjacent industrial areas and Gainesville High School. The recommended right-of-way corresponds with the MA 1 standard typical section. The recommended right-of-way for the section between Linton Hall Road and University Boulevard corresponds with the MC-1 standard typical section.

Route 28 Bypass (Sudley Road/Route 234 Business to Fairfax County) (128' existing MA-1 standard modified) – This proposed road will be an extension of Godwin Drive from Sudley Road (Route 234 Business) into Fairfax County. Limited access is proposed for this roadway, and interchanges/ innovative intersections are planned at both Sudley Road (Route 234 Business) and Lomond Drive. The Route 28 Bypass will provide substantial relief to the sections of Route 28 within Prince William County, the City of Manassas, and Fairfax County, as well as provide relief to I 66 by improving travel time reliability along these major corridors. A modified MA-1 standard is planned for this project.

Smoketown Road (Minnieville Road to Gideon Drive) (110' existing) – This road provides access to the commercial areas near and within the Potomac Mills Mall. In conjunction with Opitz Boulevard, the two roadways also provide a connection from the Prince William Parkway to Route 1. The recommended right-of-way for Smoketown Road corresponds with the existing right-of-way acquired for this already constructed roadway.

Somerset Crossing Drive (James Madison Highway/Route 15 to Lee Highway/Route 29) (128' MA-1 standard) – This roadway allows relief for east-west traffic that would ordinarily travel along Route 55 (John Marshall Highway) and provides an alternate connection for residential trips within the area.

Spriggs Road (Hoadly Road to Dumfries Road/Route 234) (110' existing) – This road provides an important north-south intra-county connection between Dumfries Road and Hoadly Road. The road provides direct access to two mid-County high schools and a middle school. The recommended right-of-way for Spriggs Road corresponds with the existing right-of-way for this already constructed project.

Sudley Manor Drive (Vint Hill Road/Route 215 to Sudley Road/Route 234 Business) (110') – This road provides access to Linton Hall Road, Wellington Road, the Prince William Parkway, and Sudley Road for residential areas such as Braemar and Victory Lakes. The proposed grade-separated interchange at Prince William Parkway (Route 234) will help alleviate the potential traffic concerns of having three major roadways (Wellington Road, Prince William Parkway, Sudley Manor Drive) intersect within proximity. The recommended right-of-way corresponds with existing right-of-way acquired for this already constructed roadway.

Sudley Road/Route 234 (James Madison Highway/Route 15 to Manassas National Battlefield Bypass) (106' MA-2 standard) – This roadway provides an important east-west connection in the northern/western end of the County. After the Manassas Battlefield Bypass or the Rt. 29 Alternate bypass is built, the existing sections of Sudley Road that traverse through the Manassas National Battlefield Park are proposed to close to through traffic and only be available to traffic with destinations within the Park. The recommended right-of-way corresponds to the MA-2 standard typical section.

Telegraph Road (Minnieville Road to Horner Road Park and Ride Lot) (128' MA-1 standard) – This roadway provides a bypass connection for traffic to and from the Potomac Mills Mall area to Minnieville Road. This road can carry the heavy amounts of traffic that would normally travel along the right-of-way constrained section of Telegraph Road between Meridian Hill Drive and Minnieville Road. The recommended right-of-way corresponds with the MA-1 standard typical section.

Telegraph Road (Horner Road Park and Ride Lot to Opitz Boulevard) (128' MA-1 existing) – This roadway provides access to the Potomac Mills Mall as well as connections to the Horner Road Commuter Lot and the PRTC transit center. Telegraph Road creates an important north-south connection parallel to I-95. The recommended right-of-way corresponds with the standard MA-1 typical section.

University Boulevard (Lee Highway/Route 29 to Godwin Drive) (128' MA-1 standard) – University Boulevard is designed to carry residential traffic from the Linton Hall/Sudley Manor areas to the planned employment areas at Innovation Park and Gainesville. Additionally, this roadway creates a major intra-county connection between Route 29 and Route 28. The recommended right-of-way corresponds with the MA-1 standard typical section. It also provides access from the south and east to Gainesville High School.

Vint Hill Road/Route 215 (Fauquier County to Rollins Ford Road (existing); Rollins Ford Road to Nokesville Road/Route 28) (128' MA-1 standard) – This road, paralleling Linton Hall Road and

connecting Fauquier County with Route 28, provides an alternative to Linton Hall Road for traffic destined for the Route 28 employment areas. The section between Fauquier County and Rollins Ford Drive is planned for 2 lanes and the right-of-way is existing. Widening is not recommended for this section of Vint Hill Road that bifurcates Greenwich due to the existing development and geometry of the road through this area. In addition, Fauquier County's Comprehensive Plan does not include widening Vint Hill Road to four lanes. The section between Rollins Ford Drive and Nokesville Road/Route 28 is planned for 4 lanes and the recommended right-of-way corresponds with the MA-1 standard typical section.

Wellington Road (Linton Hall Road to Godwin Drive) (128' MA-1 standard) – With the connection to Linton Hall Road, Wellington Road provides important intra-county access to Innovation Park, Virginia Gateway, the concert pavilion, and industrial areas fronting the roadway. The road also provides access to the City of Manassas. The combination of the bridging of this roadway over the Prince William Parkway (Route 234), and the proposed grade-separated interchange at the Prince William Parkway and Sudley Manor Drive, will help alleviate the potential traffic concerns of having three major roadways (Wellington Road, Prince William Parkway, Sudley Manor Drive) all intersect within close proximity. The recommended right-of-way corresponds with the MA-1 standard typical section.

Major Collectors

Aden Road (Nokesville Road/Route 28 to Bristow Road) (existing) – Running mainly through areas planned as Agricultural or Estate (AE), this road provides access for northern Stafford and eastern Fauquier counties, as well as parts of the Quantico Marine Base. Because no widening is being proposed for this roadway, the recommended right-of-way corresponds to the existing right-of-way for this road.

Ashton Avenue (Balls Ford Road to Godwin Drive) (110' existing) – This road provides an alternative route for traffic using Sudley Road. The recommended right-of-way corresponds with existing right-of-way acquired for this road.

Auburn Road (Fauquier County to Vint Hill Road/Route 215) (existing) – Auburn Road is the extension of Rogues Road in Fauquier County and provides access to and from the Vint Hill Road area of the County. Because no widening is being proposed for this roadway the recommended right-of-way corresponds to the existing right-of-way for this road.

Balls Ford Road (Sudley Road/Route 234 Business to Coppermine Drive) (104' MC-1 standard) – This road provides access to a variety of commercial, retail, industrial, and residential uses on the southern side of I-66. The recommended right-of-way corresponds with the MC-1 standard typical section.

Bethlehem Road (Balls Ford Road to Sudley Manor Drive) (90') – Bethlehem Road is a curving

two-lane road with industrial uses on the west side and residential uses on the east side. It is included in the Roadway Plan in order to construct safety improvements such as realignment/relocation of the road and to include pedestrian/bicycle facilities.

Blackburn Road (Featherstone Road to Richmond Highway/Route 1) (existing) – This roadway assists in distributing traffic to and from Route 1, but also serves as a way of accessing properties on the east side of Route 1 without having to access Route 1. In conjunction with Neabsco Mills Road, Opitz Boulevard, and Reddy Drive, this roadway provides a loop that connects the retail areas in Potomac Mills, I-95, the Sentara Northern Virginia Medical Center and the residential areas to the east and west of Route 1. The recommended right-of-way corresponds to the existing right-of-way along this roadway.

Bradys Hill Road (Richmond Highway/Route 1 to Kerill Road) (66' RM-2 standard) – This road provides access from Route 1 to the eastern areas of Dumfries and Triangle. As generally outlined in the Potomac Communities Plan, Bradys Hill Road is expected to be extended eastward from its existing terminus to provide a third east-west collector street in the area (in addition to Graham Park Road and Fuller Heights Road). The proposed alignment would generally follow the northern edge of the proposed Fuller Heights Park and would terminate in the vicinity of Kerill Road. The right-of-way for this roadway corresponds to the standard RM-2 typical section.

Catharpin Road (Sudley Road/Route 234 to Heathcote Boulevard) (existing); **Heathcote Boulevard to John Marshall Highway/Route 55)** (106' MC-2 standard) – This road provides an important intra-county connection between the retail and employment areas in Gainesville and the residential areas surrounding Sudley Road. The recommended right-of-way for the widened section between Heathcote Boulevard and John Marshall Highway (Route 55) corresponds with the MC-2 standard typical section. The segment between Sudley Road (Route 234) to Heathcote Boulevard is to remain as two lanes.

Clover Hill Road/Harry J. Parrish Boulevard (Wakeman Drive to Prince William Parkway/Route 234) (110' existing) – This road provides access to the Manassas Regional Airport as well as the industrial areas along the roadway. The connection of this road to the north of the Prince William Parkway also provides access into the City of Manassas. The recommended right-of-way corresponds with a modified version of the MC-1 standard typical section.

Coverstone Drive (Bethlehem Road to Sudley Road/Route 234 Business) (64' existing) – This road provides access for residential areas to Sudley Road. The proposed extension of Coverstone Drive to Bethlehem Road provides a connection that allows for access to Sudley Manor Drive and Wellington Road. Additional right-of-way for this roadway between Ashton Avenue and Sudley Road is not feasible, but sufficient pavement currently exists to provide a four-lane roadway on a lesser right-of-way (provided on-street parking is removed from both sides of the road). The recommended right-of-way for Coverstone Drive corresponds to the existing right-of-way for the sections of the road that have already been constructed.

Cushing Road (Brady Lane to I-66) (104' MC-1 standard) – This road connects Brady Lane (relocated Balls Ford Road) with I-66. Access to I-66 from this facility would be limited to outbound traffic onto I-66 east. A 400 – 500 space commuter parking lot is located on the northern part of the roadway. This road would be a four-lane divided facility with pedestrian and bicycle facilities, as depicted in the recommended MC-1 standard typical section.

Davis Ford Road (Prince William Parkway/Rt 294 to Yates Ford Road) (existing RL-2 standard modified) - This roadway provides an important connection between the Government Complex Activity Center, the residential communities and Fairfax County. Safety and operational improvements are recommended along with pedestrian/bicycle facilities.

Farm Creek Drive (Featherstone Road to Rippon Boulevard) (104' MC-1 standard) – This roadway provides access to the Featherstone Industrial Center, as well as provides access to the Rippon VRE station. Additionally, in conjunction with Rippon Boulevard and Featherstone Road, Farm Creek provides access to Route 1. The recommended right-of-way corresponds with the MC-1 standard typical section.

Fauquier Drive (Fauquier County to Nokesville Road/Route 28) (66' RM-2 standard) – This road, known as Dumfries Road in Fauquier County, connects Route 29 in the Warrenton area with Route 28 in Prince William County. Upgrading this road to a two-lane road that meets VDOT and County standards is recommended. As such, the recommended right-of-way corresponds with the RM-2 standard typical section.

Featherstone Road (Richmond Highway/Route 1 to Farm Creek Drive) (74' CI-1 standard) – Featherstone Road provides access for residential areas east of Route 1. Additionally, this road provides a connection to the industrial area along Farm Creek Drive. The recommended right-of-way corresponds to the CI-1 standard typical section.

Fitzwater Drive (Nokesville Road/Route 28 to Aden Road) (66' RM-2 standard) – This road provides access to the core area of Nokesville. Additionally, the western section of this road provides a connection to Fauquier County. The recommended right-of-way corresponds with the RM-2 standard typical section. A standard major collector typical section is not recommended due to the extent and nature of existing development along the roadway.

Freedom Center Boulevard (University Boulevard to Wellington Road) (104' MC-1 standard) – This road connects Wellington Road with University Boulevard and provides access to the George Mason University - Science and Technology Campus. The recommended right-of-way corresponds with the MC-1 standard typical section.

Groveton Road (I-66 Bridge to Balls Ford Road) (106' MC-2 standard) – This road provides access to the Manassas National Battlefield Park and to industrial areas south of I-66. Additionally, it is one of only a few overpasses crossing I-66 in this area. After a Manassas Battlefield Bypass/Rt. 29 Alt. Road is constructed, access on this roadway north of Pageland Lane will be restricted to through traffic and only allow local access. The recommended right-of-way for this section of

roadway corresponds with the MC-2 standard typical section.

Gum Spring Road (Loudoun County to Sudley Road/Route 234) (106' MC-2 standard) – This road, leading into Loudoun County, distributes trips into the employment areas in Fairfax and Loudoun Counties via Route 50. This roadway is located off Sudley Road (Route 234), northwest of the Manassas National Battlefield Park. The recommended right-of-way corresponds with the MC-2 standard typical section.

Hornbaker Road (Wellington Road to Nokesville Road/Route 28) (104' MC-1 standard) – This road provides access to Wellington Road, Innovation Park and the Prince William Parkway (Route 234) for industrial uses north of Route 28. The recommended right-of-way corresponds with the MC-1 standard typical section

Horner Road (Summerland Drive to Gordon Boulevard/Route 123) (104' MC-1 standard) – Horner Road provides intra-county connections to Gordon Boulevard, as well as the Prince William Parkway and I-95 (through Summerland Drive). Although this road carries relatively high volumes of traffic, due to right-of-way constraints the recommended right-of-way corresponds with the standard MC-1 typical section.

Longview Drive/Montgomery Avenue (Prince William Parkway/Route 294 to Opitz Boulevard) (existing) – This road distributes residential trips to Route 1 through Opitz Boulevard and the Prince William Parkway. The recommended right-of-way corresponds to existing right-of-way acquired for this road.

Lucasville Road (City of Manassas to Bristow Road) (100' RL-2 standard) – This road distributes local trips from the surrounding residential areas, as well as provides access into the City of Manassas. The recommended right-of-way corresponds with the RM-1 standard typical section.

McGraws Corner Drive (Somerset Crossing Drive to Lee Highway/Route 29) (104' MC-1 standard) – McGraws Corner Drive facilitates intra-county east-west traffic flows between Route 29 and Somerset Crossing Drive. Additionally, this road relieves congestion on Route 29 and provides improved access to residential and commercial uses along this corridor. The recommended right-of-way corresponds with the MC-1 standard typical section.

Neabsco Road (Richmond Highway/Route 1 to Daniel Ludwig Drive) (110' existing) – This road circulates local traffic from adjacent residential areas and provides access for recreational trips bound for Leesylvania State Park and the adjacent marinas on Neabsco Creek. The recommended right-of-way corresponds with existing right-of-way acquired for this road.

Occoquan Road (Old Bridge Road to Richmond Highway/Route 1) (existing) – This road provides access to the Woodbridge VRE commuter rail station and also allows for access north of Old Bridge Road into the town of Occoquan. Occoquan Road is planned to remain a four-lane, undivided facility – as such, the recommended right-of-way corresponds with existing right-of-way acquired for this road.

Old Carolina Road (James Madison Highway/Route 15 to Haymarket Town Limits) (104' MC-1 standard); Haymarket Town Limits to Lee Highway/Route 29 (77' – modified RL-2) This road provides access into the Town of Haymarket as well as improved access and mobility to residential areas planned in this corridor. This is a four-lane divided facility whose right-of-way corresponds with the MC-1 standard typical section north of the Town of Haymarket. It is a 2-lane undivided roadway with a shared use path on the east side south of the Town of Haymarket.

Old Centreville Road (Fairfax County Line to Centreville Road/Route 28) (104' MC-1 standard) – Old Centreville Road provides an additional and alternative connection as an alternative to Centreville Road (Route 28) to Fairfax County. The recommended right-of-way corresponds with the MC-1 standard typical section.

Peaks Mill Road (Purcell Road to Prince William Parkway) (104' RM-2 standard modified) – This proposed mid-County connection between Route 234 and the Prince William Parkway will provide access from planned residential areas north of Hoadly Road. This roadway provides an alternative to Hoadly Road and assists in alleviating congestion at the intersections of Dumfries Road/Hoadly Road and Prince William Parkway/Davis Ford Road/Hoadly Road. The recommended right-of-way corresponds with the RM-2 standard typical section.

Powells Creek Boulevard (Richmond Highway/Route 1 to River Ridge Boulevard) (90' - 110', existing) – This road provides additional access to Route 1 for the communities adjacent to the roadway. The recommended right-of-way corresponds with the existing right-of-way acquired for this road.

Purcell Road (Dumfries Road/Route 234 to Hoadly Road) (104' MC-1 modified standard) – This roadway provides an extension of Dale Boulevard to help facilitate traffic coming from Dumfries Road. The recommended right-of-way corresponds with the MC-1 standard typical section. Safety and operational improvements and pedestrian/bicycle facilities are recommended for this roadway.

Reddy Drive (Richmond Highway/Route 1 to Blackburn Road) (existing) – This road serves as a connector for the Opitz/Neabsco Mills loop road as it crosses Route 1 and to Rippon Boulevard. It also provides an extension of Opitz Boulevard east of Route 1/Richmond Highway and serves as a link in the “loop road” connection in the Potomac Communities (along Opitz Boulevard, Blackburn Road, and Neabsco Mills Road). The right-of-way recommended for this roadway corresponds with the existing right-of-way.

Ridgefield Road (Prince William Parkway/Route 294 to Dale Boulevard) (110' existing) – This road provides an additional connection between Dale Boulevard and the Prince William Parkway and offers an alternative to Hillendale Drive. This road provides substantial traffic relief to Hillendale Drive and other residential roadways connecting to Dale Boulevard and/or the Prince William Parkway.

Rippon Boulevard (Richmond Highway/Route 1 to Farm Creek Road) (104' MC-1 standard) – Rippon Boulevard provides access to the Rippon VRE commuter rail station from Route 1 and I-95 (through Dale Boulevard). Additionally, Rippon Boulevard provides access to the Featherstone Industrial Center. Although constrained along the eastern end of the roadway due to residential development, the recommended right-of-way corresponds with the standard MC-1 typical section.

River Ridge Boulevard (Richmond Highway/Route 1 to Wayside Drive) (90' - 110' and existing) – This road provides access to the adjacent residential communities from Route 1. The recommended right-of-way corresponds with the acquired and existing right-of-way for this roadway.

Route 29 Alternate Route (Lee Highway/Route 29 to Fairfax County) (100' MC-1 modified). This roadway will provide the southern bypass of the Manassas National Battlefield Park to facilitate closing Lee Highway and Sudley Road to through trips in the Park. A 4-lane major collector with a shared use path on the south side with a reduced right of way through the Park is recommended. It should be noted that Fairfax County does not provide a connection to this road so that it connects back to Rt. 29 in Fairfax County. This alignment is dependent on a Comprehensive Plan update in Fairfax County. There is no need for both the Rt. 29 Alternate and the Manassas Battlefield Bypass. Both have been included in the Roadway Plan to provide alternatives for restricting through traffic through the Manassas Battlefield Park, a goal of the Park Service.

Signal Hill Road (Liberia Avenue to Signal View Drive) (68' existing) – This road provides access to and from the residential and retail developments that surround it. The recommended right-of-way corresponds with existing right-of-way.

Signal View Drive (City of Manassas Park to Signal Hill Road) (100' existing) – This road serves local traffic generated in residential areas north of the Prince William Parkway and provides access to Manassas Drive and areas within Manassas Park (including the Manassas Park VRE via Manassas Drive). The recommended right-of-way corresponds with the existing right-of-way.

Smoketown Road (Griffith Avenue to Old Bridge Road) (existing) – This roadway provides access to and from the residential and commercial areas to the north of Old Bridge Road. The recommended right-of-way corresponds with existing right-of-way.

Springwoods Drive (Old Bridge Road to Chanceford Drive) (100' existing) – This road collects residential traffic originating in the adjoining subdivisions and distributes it to Old Bridge Road. The recommended right-of-way corresponds with existing right-of-way.

Telegraph Road (to be renamed) (Minnieville Road to Terminus) (existing RM-1 standard) – This road is down planed from a four lane minor arterial to a two lane major collector due to the construction of Summit School Road (now Telegraph Road).

Thoroughfare Road (James Madison Highway/Route 15 to Old Carolina Drive) (existing RM-2 standard modified) – This road provides improved access to residential uses in the Route 29

corridor and a connection between Old Carolina Road and Rt. 15 as an alternative to Somerset Crossing Drive.

Van Buren Road – North (Cardinal Drive to Dumfries Road/Route 234) (104' MC-1 standard) – This road would parallel I-95 and is proposed to connect to Cardinal Drive across from Benita Fitzgerald Drive. This road will allow an alternate route and can remove local traffic from I-95. The recommended right-of-way corresponds with the MC-1 standard typical section.

Van Buren Road – South (Dumfries Road/Route 234 to Batestown Road) (104' MC-1 standard) – This roadway parallels I-95 and provides access to and from the Town of Dumfries. This road will allow an alternate route and can remove local traffic from I-95. The recommended right-of-way corresponds with the MC-1 standard typical section.

Waterway Drive (Dumfries Road/Route 234 to Cardinal Drive) (110' existing) – This four-lane road serves local traffic generated within Montclair and provides access for this community onto Dumfries Road and Cardinal Drive. The recommended right-of-way corresponds with existing right-of-way.

Wayside Drive (Richmond Highway/Route 1 to Medford Drive) (90' - 110' existing) – Wayside Drive serves as the major roadway connection for the Wayside Village community and provides access to Route 1 for additional communities to the east of the Town of Dumfries. The recommended right-of-way corresponds with right-of-way.

Williamson Boulevard (Sudley Road/Route 234 Business to Portsmouth Road) (variable, up to 90') – This road is designed to relieve Sudley Road of local traffic generated by properties to the east of the roadway. The recommended right-of-way corresponds with existing right-of-way acquired for this road.

Yates Ford Road (Prince William Parkway/Route 294 to Davis Ford Road) (100'); (Davis Ford Road to Fairfax County) (existing) – Yates Ford Road distributes traffic from Fairfax County to the Prince William Parkway. The recommended right-of-way corresponds with the existing right-of-way.

TRANSIT PLAN

INTENT

Transit plays a major role in mobility for Prince William County. Public transit services are primarily provided by the Potomac Rappahannock Transportation Commission (PRTC) which operates as OmniRide by providing express and local bus services, and the Virginia Railway Express (VRE) which provides commuter rail services. Prince William County works closely with OmniRide and VRE to ensure that mobility needs and goals in the County are met. The County partners with OmniRide, VRE, and other transit agencies on transportation planning initiatives, strategies, transit projects, policy issues, and general coordination of local plans. Since Prince William County does not operate transit services within its boundaries, the County partners and coordinates very closely with PRTC and VRE on transit related plans. In addition, the County works with other Transit agencies such as the Virginia Department of Rail and Public Transportation to identify potential future transit alternatives to include the extension of Metrorail, high-capacity transit options, and other transit opportunities.

OmniRide is a public transportation agency located in Woodbridge, Virginia and is the operation name for mobility services offered by PRTC. OmniRide's goal is to provide safe, reliable, and flexible mobility options with the intent of reducing congestion and pollution. In addition to Prince William County, there are five other jurisdictions that are members of PRTC to include Manassas City, Manassas Park City, Stafford County, Spotsylvania County, and Fredericksburg City where each jurisdiction collects a 2.1% motor fuels tax which is used to subsidize transit services. Currently, Prince William County allocates all of the 2.1% motor fuels tax collected in the County to support OmniRide. OmniRide operates express and local bus services in neighborhoods surrounded by the busy I-95 and I-66 corridors. In addition, PRTC promotes carpools, vanpools, encourages Transportation Demand Management Strategies and works with employers to support commuter benefit programs. OmniRide currently implements a Strategic Plan that connects the local visions with strategies and actions. In 2016, OmniRide started developing this plan to help shape the agency's services for the next decade. The plan has three phases which includes developing strategies for establishing alternative funding mechanisms and sources, reevaluating OmniRide's vision to identify strategic recommendations for future services, and detailed plans for future transportation services and Transportation Demand Management (TDM) initiatives.

The Virginia Railway Express is a joint project between PRTC and the Northern Virginia Transportation Commission with the goal of providing safe, cost effective, accessible, reliable, convenient, and comfortable commuter-oriented rail passenger service between Prince William County and Washington D.C. VRE began in 1992, operating 16 trains from 16 stations and carried, on average, 5,800 passengers daily. In 2019, VRE operated 30 trains from 19 stations and carry, on average, 20,000 passengers daily. This includes 5 stations in Prince William County. VRE is overseen by the VRE Operations Board, consisting of members from each of the jurisdictions to include Prince William County that supports VRE, and supervises all operating aspects of the

Virginia Railway Express. Prince William County provides local funds to support operating and capital expenses at VRE. Prince William County's subsidy is based on the VRE Master Agreement and calculated using passenger survey data. VRE has two primary plans, the VRE System Plan 2040, which provides a framework for system investments and actions to pursue through 2040 to best meet regional travel needs and a Transit Development Plan which provides an overview of all major VRE projects and initiatives. It includes a six-year plan and a fiscally unconstrained Plan.

Please visit OmniRide (<https://omniride.com>) and VRE (<https://www.vre.org>) websites to view the latest relevant plans.

ACTIVE MOBILITY AND RECREATIONAL TRAILS PLAN

INTENT

Active mobility and recreational trails are a crucial component of providing a safe, reliable, and interconnected multimodal mobility network. Planning for redundant systems of Mobility ultimately enable residents to choose the mode of transportation which best suits their needs such as exercise, access to transit, commute to work, school, shopping, or other destinations. Access to a robust active mobility network gives County residents a healthy alternative to reach their destination and reduces vehicle traffic and greenhouse gas emissions.

A primary component of active mobility are recreational trails which focus on providing recreational opportunities to everyone. These trails can be multi-faceted and serve a variety of activities including walking, jogging, hiking, cycling, mountain biking, equestrian riding, and in the instance of blueway trails can include paddling/boating. Previously, trails were primarily considered non-motorized transportation facilities, but with the advent of new technologies like electric bicycles, the variety of users is increasing and design parameters for trails of all types are continually changing.

The successful development of an interconnected, multimodal, countywide active mobility and trail network takes investment and planning at multiple levels. The planned and proposed trails identified on the Active Mobility and Recreational Trails map shall be given high priority when reviewing land development applications and investment of various funding sources (i.e. development proffers, grants, bonds, etc.). In addition to the trails shown on the Active Mobility and Recreational Trails map, all communities should be developed with appropriate pedestrian connections (sidewalks, paths, recreational trails, etc.) that enable residents within these communities to be directly connected from their residences to the countywide trail network. Connections at this level will help ensure that residents have greater access to recreation, transit, places of employment, and will result in a decreased dependence on vehicles.

Figure 8: Bicycle Facility Summary

APPENDIX A

LEVEL OF SERVICE STANDARDS FOR ROADWAYS AND INTERSECTIONS

New development creates demands on County roadways and intersections that affect the ability of those facilities to meet established level of service (LOS) standards. Therefore, it is important that new roadways, innovative intersections and widened facilities be provided in order to address this demand. As such, proposed developments must be evaluated in order to quantify impacts to roadways and intersections caused by that development and the needed improvements to maintain or achieve the acceptable County standard for LOS. Additionally, the demand for future roadway improvements based on development growth should be monitored, and methods for maintaining an acceptable roadway LOS must be evaluated.

Rezoning or special use permits for all uses shall propose mitigation measures in order to meet the established LOS standards for roadways and intersections. Applications that fail to meet the LOS standards shall be generally considered inconsistent with the mobility component of the Comprehensive Plan.

The standard measurement for level of service is based on the following criteria as established by the most recent edition of the Transportation Research Board's "Highway Capacity Manual"¹:

- LOS A through LOS F for roadways based on volume to capacity ratios of the roadway link.
- LOS A through LOS F for intersections based on average intersection delay of the intersections.

¹ *LOS A* describes primarily free-flow operations at average travel speeds, usually about 90 percent of free-flow speed for the arterial classification. Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. Average delay at signalized and unsignalized intersections is minimal.

LOS B represents reasonably unimpeded operations at average travel speeds, usually about 70 percent of the free-flow speed for the arterial classification. The ability to maneuver within the traffic stream is only slightly restricted and on average, intersection related delays are not bothersome. Drivers are not generally subjected to appreciable tension.

LOS C represents stable operations; however, ability to maneuver and change lanes in mid-block locations may be more restricted than at LOS B.—Longer queues, adverse signal coordination, or both may contribute to lower average travel speeds of about 50 percent of the roadway's average free-flow speed. Intersection related delays may begin to become problematic for some movements. Motorists will experience appreciable tension while driving.

LOS D borders on a range in which small increases in flow may cause substantial increases in delay and hence, decreases in arterial speed. LOS D may be due to adverse signal progressions, inappropriate signal timing, high volumes, or some combination of these factors. Average travel speeds are about 40 percent of free-flow speed. Intersection delays are problematic for many of the critical movements (i.e. side streets or turning movements) although the intersection as a whole may still be functional.

LOS E is characterized by significant delays and low average travel speeds of one-third the free-flow speed or less. Such operations are caused by some combination of: adverse progression, high signal density, high volumes, extensive delays at critical intersections, and inappropriate signal timing. At intersection LOS E, critical movements have high average delays and the intersection as a whole reaches the point of near gridlock.

LOS F characterizes arterial flow at extremely low speeds below one-third to one-fourth of the free-flow speed. Congestion is likely at signalized intersections, as well as high delays and extensive queuing. Adverse progression is frequently a contributor to this condition.

The Level of Service (LOS) rating system to measure traffic congestion on roadway segments, intersections and entire urban areas was initially presented in the 1965 *Highway Capacity Manual*. VDOT, FHWA and the County use LOS as a benchmark for the success of regional and local transportation roadway networks. The fundamental reason that state and local governments plan new or widen roads is to improve LOS during the peak hours, which creates roads that may be underutilized during the rest of the day.

While congestion is a considerable problem, it is not the County's only problem. The County has recognized the need for multimodal levels of service through the Strategic Plan's Mobility Goal to "have an accessible, comprehensive, multimodal network of transportation infrastructure that supports local and regional mobility." One of the objectives to achieve this goal recognizes the need to build a robust economy and to provide more job opportunities within the County to help reduce commute times and congestion issues. In order to implement the goals of the Town Centers/Activity Centers /Small Area Plans, the County needs new performance measures to measure accessibility, economic development, sustainability and livability. This requires less reliance on achieving a specific LOS, and more reliance on creating a sense of place with measures related to economic, social and environmental outcomes, where people live, work and play in the same geographic area and accept that congestion is expected in its Activity Centers.

In previous Comprehensive Plans, the minimum acceptable LOS for roadways and intersections in Prince William County was LOS D. All developments were expected to maintain LOS D or better for roadways and intersections currently operating at or above LOS D, and not deteriorate roadways and intersections currently operating below LOS D. Meeting the LOS standards can be achieved through proffers or conditions providing: additional roadway capacity, signalization, turn lanes, traffic reducing transportation demand management strategies, or other improvements that either increase the capacity of the transportation network or reduce the traffic demand on the network.

However, the County recognizes that it is not possible to "buy" our way out of congestion through road investments alone, and has reduced the acceptable standard in the Mobility Chapter to LOS E. This standard better aligns with the multimodal focus of the chapter by allowing for reduced levels of service in areas where there are alternative transportation options, including transit.

Additionally, the LOS standards do not account for the impacts of people walking, biking, rolling and/or riding transit. A related measure posts vehicle hours of delay (VHD), which is related to the vehicle miles traveled (VMT) in the Strategic Plan. However, a sole focus on impacts to drivers undermines consideration of more value-aligned goals including safety, access, sustainability and resilience.

In the future, the County will explore evaluating transportation performance by metrics beyond conventional LOS and VHD. The Virginia Department of Transportation (VDOT) and

the Department of Rail and Public Transportation (DRPT) recognize that Multimodal System Plans for Activity Centers/Small Area Plans can be developed so that the future roadway network and street sections for the entire area could be established with this plan. DRPT updated the Multimodal System Plan Guidelines in 2020 to bring them in line with the state practice and new national guidance. They provide a process for jurisdictions to designate connected networks for all travel modes and design and retrofit corridors that fit within the surrounding context within centers of activity, Prince William County followed the principals of the Multimodal System Plan in the development of its Small Area Plans/Activity Centers but has not applied to DRPT for approval of these plans. This is due to the complexity of the original Guidelines published in 2013. At the time that the Small Area Plans were being developed, there had not been a jurisdiction that had received approval for a Multimodal System Plan, even though one County had been trying for 5 years to gain this approval. The County will continue to follow these guidelines though may not determine to apply for DRPT/VDOT approval for the Plan. Note that TIAs for individual rezonings would informs turn lanes and signalization, but not road sections.

LEVEL OF SERVICE STANDARDS FOR TRAILS

The County's goal of developing the trail network proposed in this chapter will require a multi-departmental approach to reviewing land development applications/proposals, most importantly through coordination of the Planning Office, Department of Transportation, and Department of Parks, Recreation, and Tourism. The review of development applications should take into consideration the shared use paths, bicycle facilities, and recreational trails shown on the Active Mobility and Recreational Trails map, as well as consider pedestrian connections via sidewalks within all new developments. To satisfy level of service, all developments should provide pedestrian and/or bicycle connections within its boundaries that are of a similar type and design consistent with current standards, adjacent development, and/or as recommended by County staff during the development review process. These facilities should be designed in accordance with current design guidelines (current applicable guidelines are identified below). A multi-departmental review of bicycle and pedestrian connectivity will help ensure that all residences are connected to the larger countywide trail network and that general connectivity is provided at the neighborhood level.

The following design guidelines identify level of service quality for the various trail types:

- Shared Use Path – Section 600 of PWC Design and Construction Standards Manual (DCSM)
- Bicycle Lane
- Sharrow
- Paved Shoulder
- Bike Parking/racks for Specific Land Uses – Section 600 of DCSM
- Bike Repair Stations

- Recreational Trail (Asphalt Park Trail) – Section 600 of DCSM
- Recreational Trail (Full Bench Cut Trail/Relevant DPRT Class 1 to 5 Trail) – DPRT Trails Standards Manual (2017) and Section 600 of DCSM
- Recreational Trail (Hiking Trail/Greenway Trail/DPRT Class 1 to 5 Trail) – DPRT Trails Standards Manual (2017) and Section 600 of DCSM
- Recreational Trail (Equestrian Trail) – DPRT Trail Standards Manual (2017) and Section 600 of DCSM
- Recreational Trail (Multi-Use/Mountain Bike Trail) – DPRT Trail Standards Manual (2017)

In addition to the policies and action strategies contained within the Mobility chapter the Parks, Recreation & Tourism Chapter includes a number of policies aimed at developing and expanding the County's recreational trail system and general guide level of service for the County's trail system.

TRANSIT

OmniRide

DRPT has established guidelines that measure performance and determines improvements to systemwide and each service type – local vs commuter service. Metrics such as ridership, cost efficiency, safety, service quality and system coverage/availability are measured. In general, ridership on the local routes matches with the level of service provided. OmniRide planners review the performance data to determine whether routes need to be adjusted to increase or decrease route coverage/schedule. OmniRide also reviews large rezoning cases to determine the need for proffered bus shelters and/or shuttle runs within the development or to VRE/Commuter Parking Lots. OmniRide is currently developing on-time and performance methodology and standards and will be included in updates to the FY2020-2029 Transit Strategic Plan

(https://omniride.com/omniride/assets/File/OR20_TSP_FullReport_2020-03-23_DRAFT.pdf).

Virginia Rail Express (VRE)

VRE has established a load factor rather than level of service (LOS). For rolling stock, VRE's goal is to provide a seat for each passenger on a train. If the load factor is exceeded, VRE will add additional cars to a train or another train to service to alleviate passenger crowding. Per the VRE Transit Development Plan (TDP), VRE maximum load factor is 1.11 (ratio of total passengers to seated passengers) during peak periods, based on the seating capacity of VRE equipment + standing capacity (per manufacturer). In practice, however, the ability to add seats to a train or additional trains into service can be constrained by the available VRE coach fleet size and agreements with host railroads that limit the number and times VRE trains can be operated.

For station planning and design, there are industry accepted guidelines that can be used by an agency for planning purposes for station facilities. For example, VRE has used the TCRP Transit Capacity and Quality of Service Manual, 3rd Edition, Exhibit 10-32 (<https://www.trb.org/Main/Blurbs/169437.aspx>), LOS C as the guideline to determine the platform area to accommodate future passenger loads when designing new platform facilities such as the current L'Enfant Station improvement project. That guideline can also be applied to existing facilities to justify the need for platform expansion, although VRE platforms most subject to crowding are at the destination stations where the two lines merge (e.g., Alexandria inward) and there is the potential for passengers to be waiting for trains from both lines at the same time. Because passenger loads are typically less at origin stations and because platforms have been designed to accommodate a full train length, LOS at those stations tends to stay low.

The Transit Cooperative Research Program (TCRP) Manual addresses all aspects of physical station design (e.g., stair width, sidewalks, etc.) and include LOS guidelines for some of those station elements too. Most VRE stations are fairly simple, and those other guidelines may not apply, but some may be used in station planning and design to confirm other features (e.g., stairway width) will accommodate expected passenger loads.

APPENDIX B

OVERVIEW OF TRAVEL DEMAND MODELING

Travel demand modeling in all metropolitan regions is based upon the model developed by the federally mandated Metropolitan Planning Organization (MPO). For the Washington, DC region, the MPO is the Transportation Planning Board (TPB) of the Metropolitan Washington Council of Governments (MWCOG). VDOT derives its Northern Virginia District model from the MWCOG model which is the basis for the model used in Prince William County. These models all forecast average 24-hour weekday traffic volumes (AWDT).

The essential difference between the County model and the regional model is the level of detail included within each, both in terms of the roadway network and the demographic data used to generate the number of trips being simulated. The MWCOG model is a multi-jurisdictional model which forecasts future travel demand across the entire Washington, DC region. The VDOT model simulates traffic across northern Virginia and demographic data are more detailed than used in the MWCOG model. The County's model, developed to support the County's Comprehensive Plan, is even more detailed. In addition to Interstate and Primary roadways generally found in the MWCOG and VDOT models, the County model also includes a number of Secondary roadways as well. For the purposes of the County model, all roads in the Roadway Plan of the Comprehensive Plan are included, as well as other significant roadway connections within the model as determined by County staff.

The County travel demand model is primarily used to simulate the effect of loading future traffic (as generated by land uses identified in the Land Use Chapter of the Comprehensive Plan) on a future roadway network. The primary goal is to identify what improvements may be required for specific roadway segments in order for them to operate at acceptable levels of service (see Appendix A) with the inclusion of the proposed land use related traffic. There are four main steps in the travel demand modeling process: trip generation, trip distribution, mode choice and traffic assignment. A brief discussion of each of these steps follows.

Trip Generation

The first step in the modeling process is to determine how many trips will occur in the future. To do this, future land uses, as determined by the Prince William County Planning Office and submitted to MWCOG, are converted into average daily person trips. The PWC Planning Office submits its forecasts for employment, housing and population for the next 25 years and MWCOG reviews the data from all of its members and determines control totals for each demographic for each jurisdiction. These totals must be maintained for all travel demand model runs. This is accomplished by applying standard trip-making rates to the variables which make up future land use. Dwelling units represent the location where trips begin, or are produced, and jobs represent the locations where trips end, or are attracted. To facilitate this conversion, the area being modeled is divided into small geographic areas called traffic analysis zones (TAZs). The result of this first step in the modeling process is a table of person-

trip ends produced and attracted for each of the TAZs by trip purpose (i.e. work, shop, industrial, other).

Trip Distribution

The second step in the modeling process uses the table of person-trip ends produced and attracted by each TAZ and allocates those trips between the TAZs. This is accomplished by matching each trip produced in each TAZ to a trip attracted in each TAZ with MWCOG's Origin Destination information. The result of this step is a table which shows how many person-trips will take place between each of the TAZs. This table is referred to as a zone-to-zone person-trip table.

Mode Choice

The third step in the modeling process forecasts how each trip in the zone-to-zone person-trip table will take place. A trip can take place by car, bus, truck or by some other means or mode of travel. As noted earlier, the model used in Prince William County uses primarily two modes - automobile and transit/HOV. The MWCOG model uses a very detailed process to calculate this split based on the relative time and cost of using each mode for each trip and the vehicle ownership of the trip maker. The County model transfers this information to the County's TAZ geography. The results of this step in the modeling process are a series of tables which identify zone-to-zone person-trips by mode of travel. Following the convention of an earlier version of the MWCOG model, the County model performs this split only for work trips. For travel completely within PWC, trip tables that are sensitive to trip purpose, traveler household income and proximity of bus route/ VRE line to traveler's origin and destination are used. These tables are based on MWCOG's home interview survey (most recent 2007-08) and adjusted to reflect the actual number of transit trips within PWC. For trips outside of PWC, the model uses the outputs of the MWCOG model which incorporate all of its assumptions about transit. Pedestrian/Bicycle trips are removed from the trip generation step based on trip purpose and Area Type (based on population and employment density as calculated by TAZ). The model uses a 20-40% ped share for CBD areas and significantly less for other areas such as Urban or Suburban Heavy. The County Planning Office and Department of Transportation have identified percentage of pedestrian/bicycle trips internal to each identified Activity Centers.

Traffic Assignment

The traffic assignment step in the modeling process places the zone-to-zone person-trips by automobile mode onto the roadway network which has been assumed to be constructed in the same goal year as the demographic data used in the Trip Generation step. Trips made by transit are not assigned to this network. The roadway network is developed in three phases: the network that currently exists is identified, then expanded to include any improvements which have been committed to or funded, and finally expanded again to include any additional improvements desired and/or required to satisfactorily handle

projected traffic. Typically, this step in the process involves assigning the trips identified in the previous three steps to the roadway network which will be completed after all identified improvements have been made. The entire network is then evaluated and roadway segments not operating adequately are identified and improvements are envisioned to improve performance. This can be a very time-consuming step because several model runs are required to achieve desired levels of service. In the final analysis, it is possible that not all segments of the roadway system will be operating at the desired level of service. In many cases, roadway improvements which would aid in mitigating congestion are clearly infeasible due to cost, right-of-way impacts, environmental concerns, or other considerations.

The final results of the four-step modeling process include a map which shows how each of the roadway segments included in the network will operate in the future. From this map, a list of required improvements to the existing roadway network is derived in order for the transportation system to operate as shown on the map. As noted at the beginning of this section, the travel demand model evaluates the average number of automobile trips which will likely occur on a theoretical roadway network on an average weekday in the future. The level of congestion for each segment of the network is expressed in terms of "Level of Service" (as discussed in Appendix A). The travel demand model is a planning tool intended for generalized, county-wide application. It does not evaluate how well individual intersections will operate during periods of peak volume. That type of analysis is conducted using more detailed micro-simulation software and an examination of trip-making at a much finer level of detail than an area-wide travel demand simulation model. This type of analysis typically takes place during the review of development applications and site/subdivision plans.

APPENDIX C

OVERVIEW OF CONGESTION MANAGEMENT

Managing congestion is a complex process of balancing the traffic demand of a roadway network with the capacity of that network. This process can be addressed from the demand perspective (demand management), the supply perspective (operational management), or from a combination of the two methods (control measures). What follows is an overview of the available tools currently in use throughout the metropolitan Washington, D.C. region.

Transportation Demand Management

Transportation Demand Management (TDM) are strategies that redistribute or reduce travel demand by influencing traveler's behavior. TDM is defined in Title 23 of the United States Code and in the Washington D.C. region, TDM strategies are established by the federally designated Metropolitan Planning Organization (MPO), the Metropolitan Washington Council of Governments (MWCOG). Managing demand on the County roadway network is consistent with the MWCOG's regional strategies, as detailed in the Transportation Planning Board (TPB) Visualize 2045 Appendix E (<https://visualize2045.org/>). TDM strategies include commuter programs, public transportation improvements (including the provision of bicycle and pedestrian facilities), and growth management through transportation and land use activities.

TDM strategies are most often provided in the form of employer-based incentives such as ridesharing and telecommuting (which reduce demand), and/or flexible work schedules (which shift demand to non-peak times of the day). TDM strategies can also be provided in the form of neighborhood-based incentives such as shuttle bus and neighborhood day-care/pre-school childcare services. These work and homebased improvements help to reduce the demand on the highway system. By assembling TDM plans from across the County, trends can be identified and methods developed to further reduce demand at the public level. This can include strategies such as providing public shuttle buses or regular bus service from major employer/neighborhood collection points to transit centers. When these TDM strategies are organized into a plan, they can be quantified, and value established. Therefore, when developers of major traffic generating projects submit a TDM plan which includes provisions for ensuring implementation, incentives in the form of trip generation credits are provided in accordance with the County DCSM (DCSM). The amount of credit that can be taken varies based on the extent of the improvements provided and their level of success in similar situations. The TDM strategies must always be given a quantifiable measure of effectiveness, as well as alternative solutions in the event their strategies are not successful.

Operational Management

Managing the capacity and maximizing the system effectiveness of the roadway network is a key element of TDM established by Title 23 and MPOs, as a part of the scope of their planning process, are encouraged to provide strategies and projects that will promote operational management. Operational management strategies are cost effective operational improvements and can include (but are not limited to): restriping of intersections, coordination and synchronization of traffic signals, closure of median breaks, incident management programs, transit management programs, priority transit/emergency vehicle routing and Intelligent Transportation System (ITS) technologies, such as electronic toll collection, automated traffic enforcement and real-time parking management.

Although the preceding Operational Management strategies largely fall within the purview of the MPO and VDOT, there is also a role for the County in managing roadway capacity. As a part of the development application process, the County is responsible for identifying measures to mitigate the impacts of projects on the roadway network. These mitigation measures include operational improvements such as providing or upgrading traffic signals, installing left and right turn lanes, restriping existing intersections, and consolidating access points through interparcel connectivity. Through this process, the County is afforded the opportunity to assist in improving the region's ability to manage transportation network capacity and improve the flow of traffic on the County's roadways.

Transportation Control Measures

Strategies and programs which address management of both the demand and the capacity of the roadway network fall into the category of transportation control measures (TCM). US Title 23 requires metropolitan planning areas to provide a congestion management system during their transportation planning process, which provide measures for identifying and mitigating congestion, as well as monitoring the effectiveness of the various management strategies. The congestion management system for the Washington D.C. region is the TPB's Congestion Management Process. The purpose of these strategies is to reduce transportation-related emissions by reducing vehicle use or improving traffic flow as defined in Section 108 of the Clean Air Act (CAA). TCMs are an important part of meeting the standards of the CAA and helping the region to attain the National Ambient Air Quality Standards (NAAQS). In areas of non-attainment of the NAAQS for ozone or carbon monoxide pursuant to the Clean Air Act, Federal funds may not be programmed for any highway project which results in a significant increase in carrying capacity for single-occupant vehicles unless the project is part of an approved congestion management system.

While the MPO is responsible for developing the TCMs for the region, the County is a crucial participant. By establishing County-wide TCM strategies, the Board of County Supervisors is able to better guide and support regional efforts.

APPENDIX D

PROPOSED INTERCHANGE AND INNOVATIVE INTERSECTION LOCATIONS

Interchanges utilize grade separation to allow for the movement of traffic between two or more roadways utilizing a system of bridges, overpasses and tunnels to allow for the free flow movement of at least one of the routes that pass through the interchange.

Innovative intersection and interchange designs modify vehicle, pedestrian and bicycle movements at conventional intersections to provide cost-effective solutions and options to reduce delay, increase efficiency and provide safer travel for all users. Additional info can be found on VDOT's webpage: <https://www.virginiadot.org/innovativeintersections>.

The following section highlights corridors and locations of proposed interchanges or proposed upgrades to intersections throughout the County. These improvements and upgrades also include innovative intersection designs.

- **Route 1 (Richmond Highway) / Route 123 (Gordon Boulevard)**
- **Route 1 (Richmond Highway) / Dale Boulevard**
- **Route 1 (Richmond Highway) / Route 234 (Dumfries Road)/Potomac Shores Parkway**
- **Route 1 (Richmond Highway) / Joplin Road/Fuller Road**
- **Route 1 (Richmond Highway) / Neabsco Road / Cardinal Drive**
- **Route 1 (Richmond Highway) / Russell Road**
- **Route 123 (Gordon Boulevard) / Old Bridge Road**
- **Route 28 Bypass (Godwin Drive Extended) / Route 234 Business (Sudley Road)**
- **Route 28 Bypass (Godwin Drive Extended) / Lomond Drive**
- **Route 234 Bypass (Prince William Parkway) / Sudley Manor Drive/Wellington Road**
- **Route 234 Bypass (Prince William Parkway) / University Boulevard**
- **Route 234 Bypass (Prince William Parkway) / Clover Hill Road**
- **Route 234 Bypass (Prince William Parkway) / Brentsville Road / Dumfries Road**
- **Route 294 (Prince William Parkway) / Old Bridge Road**
- **Route 294 (Prince William Parkway) / Minnieville Road_**
- **Route 294 (Prince William Parkway) / Smoketown Road**

- **Minnieville Road / Dale Boulevard**
- **Minnieville Road / Smoketown Road**

In addition to specific locations, general or innovative intersection improvements are also proposed at intersections along all primary and minor arterial roadways to provide operational improvements where appropriate.

APPENDIX E

COST ESTIMATES OF ROADS/INTERCHANGES

Project Type	Project Name	Project Description	Project Cost (2020)
Innovative Intersection	Prince William Parkway/Old Bridge Road	Intersection improvements to realign Prince William Parkway	\$140,000,000
Innovative Intersection	Route 1/Route 234/Potomac Shores Parkway	Quadrant intersection and commuter lot	Developer Project
Innovative Intersection	Route 15 and Route 29	Proposed innovative intersection at Route 15 and Route 29	\$80,000,000
Innovative Intersection	Route 234/Clover Hill Road	Innovative Intersection consisting of bowtie intersection	\$16,000,000
Innovative Intersection	Route 234/University Boulevard	Innovative Intersection consisting of quadrant roadway intersection	\$30,000,000
Interchange	Prince William Parkway/Minnieville Road	Proposed interchange location	\$80,000,000
Interchange	Route 1/Dale Boulevard	Proposed interchange location	\$140,000,000

Project Type	Project Name	Project Description	Project Cost (2020)
Interchange	Route 1/Joplin Road/Fuller Road	Proposed interchange location	\$140,000,000
Interchange	Route 1/Route 123	Proposed interchange location	\$120,000,000
Interchange	Route 28 Bypass/Godwin Drive/Sudley Business	Proposed interchange location	\$140,000,000
Interchange	Route 28 Bypass/Lomond Drive	Proposed interchange location	\$140,000,000
Interchange/Innovative Intersection	Route 234/Sudley Manor Drive and Wellington Road	Proposed interchange at Route 234 and Sudley Manor Drive to grade separate traffic and innovative intersection at 234 and Wellington to further reduce congestion and improve throughput on Route 234	\$100,000,000
Road Project	Bristow Road (Route 28 to Railroad Tracks)	Proposed road improvement to widen 0.8 miles of Bristow Road between Nokesville Road (Route 28) and the railroad tracks from two to four lanes.	\$14,400,000
Road Project	Catharpin Road (Heathcote Drive to Route 55)	Proposed road improvement to widen roadway from 2 to 4 lanes. Total length of proposed widening is 0.7 miles. Project will include a 10' shared use path on the east side of the roadway.	\$12,600,000

Project Type	Project Name	Project Description	Project Cost (2020)
Road Project	Dale Boulevard (Benita Fitzgerald Blvd to Route I)	Proposed road improvement to widen from 4 lanes to 6 lanes. Total length of project is approximately 3.6 miles	\$64,800,000
Road Project	Davis Ford Road	Existing roadway	N/A
Road Project	Devlin Road (Linton Hall Road to University Boulevard)	Proposed road improvement to widen Devlin Road from two to four lanes between Linton Hall and University Boulevard. Project will include pedestrian and bicycle facilities	\$40,000,000
Road Project	Farm Creek Drive (Featherstone Road to Rippon Boulevard)	Proposed road improvement to widen from two to four lanes. Project length is approximately 1 mile and will include pedestrian and bicycle facilities	\$18,000,000
Road Project	Fitzwater Drive (Route 28 to Aden Road)	Proposed road improvement to widen existing two-lane roadway to RM-2 typical standard with a 10' shared use path	\$4,500,000
Road Project	Fleetwood Drive (Fauquier County to Aden Road)	Proposed road improvement to widen approximately 5 miles of existing lanes to right of way standards for a two lane minor arterial roadway	\$25,000,000
Road Project	Gideon Drive (Dale Boulevard to Smoketown)	Proposed road improvement to widen 0.8 miles of roadway from 4 lanes to 6 lanes. Project includes a 10' shared-use path on the east side of the roadway	\$144,000,000

Project Type	Project Name	Project Description	Project Cost (2020)
Road Project	Groveton Road (Pageland Lane to Balls Ford Rd)	Proposed road improvement to widen roadway from two to four lanes along a 0.5 mile segment. This road provides access to Manassas National Battlefield Park and industrial areas south of I-66	\$9,000,000
Road Project	Gum Springs Road (Loudoun County to Sudley Road)	Proposed road improvement to widen from two to four lanes. Project length is approximately 0.3 miles. A 10' shared use path will be constructed on the east side	\$5,400,000
Road Project	Heathcote Boulevard Extension	Extend existing Heathcote Boulevard as a two-lane roadway to connect to Antioch Road	\$50,000,000
Road Project	Horner Road (Prince William Parkway to Route 123)	Proposed road improvement to widen from 2 lanes to 4 lanes along a 1.3 mile segment. Improvements include a 10' shared-use path on the south side	\$23,400,000
Road Project	I-95 (Fairfax County to Route 234)	Proposed road improvement. Widening from 6 SOV / 3 HOT lanes to 8 SOV / 3 Hot lanes	\$500,000,000
Road Project	I-95 (Route 234 to Stafford County)	Proposed road improvement. Widening from 6 SOV / 3 HOT lanes to 8 SOV / 3 Hot lanes	\$300,000,000
Road Project	Manassas Battlefield Bypass	Proposed four-lane road connection to provide a bypass around the Manassas Battlefield National Park	\$450,000,000

Project Type	Project Name	Project Description	Project Cost (2020)
Road Project	McGraws Corner Drive (Somerset Crossing Drive to Route 29)	Proposed road improvement to extend McGraws Corner Drive as a four-lane roadway 0.7 miles from Route 29 to Somerset Crossing. Project includes a 10' shared use path along the south/west side	\$25,000,000
Road Project	Neabsco Road (Route 1 to end)	Proposed road improvement to widen roadway from two to four lanes the approximately 2-mile length of Neabsco Rd. Project includes a 10' shared use path on the south side	\$36,000,000
Road Project	Old Centerville Road (Fairfax County to Route 28)	Proposed road improvement to widen from two to four lanes. Total project length is 1.8 miles	\$100,000,000
Road Project	Opitz Boulevard (Gideon Drive to Route 1)	Proposed road improvement to widen from four to six lanes. Total project length is 1.5 miles and includes a 10' shared-use path on the southern side of Opitz Blvd	\$27,000,000
Road Project	Pageland Lane	Widen from 2 to 4 lanes between Route 29 to Route 234 (Sudley Road). Includes shared use path on both sides of roadway	\$100,000,000
Road Project	Peaks Mill Road	Extend Peaks Mill Road as a two-lane roadway to connect Purcell Road to Prince William Parkway	\$40,000,000
Road Project	Powells Creek Boulevard (Route 1 to River Ridge Boulevard)	Proposed road improvement to widen 0.8 mile segment from two to four lanes	\$14,400,000

Project Type	Project Name	Project Description	Project Cost (2020)
Road Project	Prince William Parkway (Hoadly Road to Liberia Ave)	Proposed road widening from four lanes to six lanes	\$81,000,000
Road Project	Rippon Boulevard (Route 1 to Farm Creek Road)	Proposed road improvement to widen from two to four lanes on this 2 mile segment. Project includes a 10' shared use path on south side	\$36,000,000
Road Project	Rollins Ford Road (Linton Hall Road to University Boulevard)	Proposed road improvement to extend Rollins Ford to the proposed University Blvd Extension as a four-lane roadway with a 10' shared-use path.	\$8,000,000
Road Project	Route 1 (Brady's Hill to Dale Boulevard)	Proposed road improvement to widen Route 1 from four to six lanes with a 10' shared use path along the west side of the roadway and a 5' sidewalk along the east side of the roadway. Project includes improvements to intersections along the entire 2 mile segment	\$150,000,000
Road Project	Route 15 (Loudoun County to Route 234)	Widen road from 2 lanes to 4 lanes with a 10' shared use path on the east side. Project length is approximately 4.2 miles.	\$75,600,000
Road Project	Route 15 (Route 29 to I-66)	Proposed road improvement. Widening from 2 lanes to 4 lanes. Project length is approximately 3.6 miles	\$64,800,000
Road Project	Route 15 Overpass	Four-lane overpass at the Norfolk Southern Railroad crossing at Route 15,	\$70,000,000

Project Type	Project Name	Project Description	Project Cost (2020)
		that will accommodate vehicles, pedestrians, and bikers.	
Road Project	Route 234 Bypass (Route 28 to I-66)	Proposed road improvement to widen from four to six lanes. Project length is 4.4 miles and includes a 10' shared-use path and intersection interchanges/innovative improvements	\$150,000,000
Road Project	Route 28 (Fitzwater Drive to Fauquier County)	Proposed road improvement to widen roadway from two to four lanes and construct a 10' shared use path along south side	\$37,800,000
Road Project	Route 28 Bypass	Extension of Godwin Drive from Sudley Business to Fairfax County Line	\$300,000,000
Road Project	Route 29 (Heathcote Drive to Pageland Lane)	Proposed road improvement to widen to four lanes.	\$68,400,000
Road Project	Route 29 (Route 15 to Virginia Oaks Drive)	Proposed road improvement to widen 2.6 miles of roadway from four to six lanes from Route 15 to Virginia Oaks Drive.	\$46,800,000
Road Project	Route 29 Alternate	Proposed four-lane facility parallel to I-66 to provide a bypass or alternate roadway to existing Route 29 around the Manassas Battlefield National Park.	\$250,000,000

Project Type	Project Name	Project Description	Project Cost (2020)
Road Project	Signal Hill Road (Liberia Avenue to Signal View Drive)	Proposed road improvement to widen to four lanes with a 10' shared use path. Total project length is 0.25 miles.	\$4,500,000
Road Project	Van Buren Road (Cardinal Drive to Route 234)	Proposed road improvement to construct an extension of Van Buren Road to connect Cardinal Drive to Dumfries Road (Route 234). Roadway will be designed as a four-lane divided major collector and includes a bridge over Powells Creek, a 10' shared-use path and 5' sidewalk.	\$100,000,000
Road Project	Van Buren Road (Route 234 to Batestown Road)	Proposed road improvement to widen 1.1 mile segment from two to four lanes	\$19,800,000
Road Project	Vint Hill Road	Widen from 2 to 4 lanes between Schaeffer Lane and Rollins Ford Road. Note-widening could extend to Fauquier County Line	\$80,000,000
Road Project	Wayside Drive (Route 1 to Congressional Way)	Part of internal road network for Potomac Shores	Developer Project
Road Project	Wellington Road (Linton Hall Rd. to Godwin Drive)	The 4.8 mile segment from Linton Hall to Route 234 Wellington will be widened from two to four lanes. The 1.9 mile segment from Route 234 to Godwin will be widened from four to six lanes. The total project length is 6.7 miles and will include a 10' shared-use path	\$155,000,000

Project Type	Project Name	Project Description	Project Cost (2020)
Road Project	Williamson Boulevard (Route 234 Business to Portsmouth Road)	Improvements will be within existing right of way	\$8,000,000

Figure 9: Cost Estimates of Roads/Interchanges
