VIRGINIA COMMERCIAL **APPLE CROP REPORT**

The Virginia commercial apple crop is now expected to amount to 3,100,-000 barrels, which is about 10 per cent above the October forecast, and is nearly 16 per cent belo wthe 1928 crop of 3,700,000 barrels. Carlot shipments to November 2nd of 10,482 cars indicate that the total shipments will be about 17,000 cars for the season. Last year the season's shipmens amounted to 20,281 cars.

Apples matured earlier than usual this season and practically all of the crop was harvested by the middle of October. The quality was poorer than al and a smaller percentage of the crop packed out 6. S. No. 1 grade than year. The poor quality was argely due to damage from scab, but re was also more than usual injury from scale and hail.

of Ford products on a time basis, ised the following information to Arthur S. Boatwright, local Ford

The reduction in financing costs aned on November first by the pany, were made in conformance with Ford policy to contribute towards the continuation of good business ghout the country, and in conthrou templation of lower money costs to them as a result of the general softening of money rates.

The reduction amounts to from 8 to 15 per cent of pervious financing costs on a general average over previous costs for the same model car, and appreciable savings are possible in all territories, depending upon the amount of the unpaid balance, the number of months the transaction is to run and the amount of the reduc-tion in the price of the particular Ford car purchased.

"The purpose is to reduce the cost of credit to the individual who buys on time; commensurate with sound business policies. This reduction in the cost of credit is made possible by the many economies that arise from eration of an authorized plan, the basis of nation-wide volume dealing exclusively with the Ford ler organization. Simplicity of ar organization. Simplicity or is, special bookkeeping and sta-cal machinery and general uni-aity of procedure all under cen-ized control and management, are antly contributing to cut the

"This cost of credit is just as vital as the cost of any of the material that goes into the building of the automobile. It is in every sense a commod-ity which becomes a part of the com-pleted article before it is ultimately old to the public.

Soccer Teams of Two Schools Stage Thrilling Battle In 6-4 Score.

The fast going soccer team of the Occoquan High School won its third successive victory on Monday when they trounced Manassas High School by a score of 6 to 4.

The Occoquan squad started out with a rush and taking a 4 to 0 lead in the first half maintained supremacy through to the end, aided by good passing of the forward line and the strong defense of the full backs.

It was a fighting Manassas team that took its first defeat of the season and despite an injury to Ambrose every man fought valiantly to pick up the lost points, and with some neat passing and brilliant attacking, the plucky Orange team scored four points.

otation, the increased value of the crops due to the use of one ton of lime once in the rotation was \$53.04. At Charlotte C. H. the increased value of the wheat and hay crops in a simi. ar rotation was \$30.38

On wheat, corn and hay in a like rotation at Chatham, Va., the increased value of crops due to the application of one ton of lime was \$46.20. At Bowling Green, Va., the increased value of crops in the same rotation amounted to \$45.31. At Blacksburg, Va., on a limestone soil in a rotation of corn, wheat and hay two years the increased value of crops due to the application of one ton of lime once in the rotation was \$44.20.

In each case one ton of burnt lime was used to the acre which is approximately equivalent to two tons of ground limestone. No account was taken of the increased yield of straw and stover on the limed plats.

In every case, the hay was mixed clover and timothy. The great increases of yields of hay was largely due to the increased amounts of colver on the limed plats. The increased yields of wheat and corn were largely due to the fact that clover- a legum -grew on the limed plats while there was very little clover on the unlimed plats.

While no official experiments have been carried out in Prince William the increased yields as reported by farmers here would indicate that results approximately as good may be expected from liming in any part of the county.

JELLIES AND PRESERVES FOR CRIPPLED CHILDREN

Following the annual custom of the Manassas Woman's Club boxes of only one reason and that is because it fruits, preserves and jellies, will be ent to the Hospital for Crippled Children at Richmond.
